1. Put the leveller in the middle by e.g. pushing the manual keys.
2. Measure the distance between the upper and lower plate so that it will be exactly the same on both sides (about 91 mm).
3. Push the DP for 8 s or until the LED's are flashing.
4. Step forward with the S-key by pushing 4 times to activate the position programming of HOME.
5. Confirm the setting within 8 s with DP.

NOTE: After activated current output you have to turn off the supply current to reset the leveller.

Equipment — Boom Levelling *)**Operation of Boom Levelling**

The boom levelling system is electro-hydraulically operated. The sensor (B16) located on the boom valve gives position information for the automation of the boom levelling.

The levelling system levels the boom on the off-road driving.

The function switches on when the work brake disengages. When the work brake is engaged the boom levelling is disengaged after it has finished the levelling work.

While the boom is manually controlled and the work brake is not engaged, the boom levelling system levels the boom after manual controlling is finished.

If the work brake is engaged and the boom is manually controlled, the boom levelling system activates after the work brake disengages.
