Time Reversal Focusing Computer Interface Application:

Time-Reversal Focusing for Human Computer Interface Application Hla Myo Tun, Zaw Min Naing, Win Khine Moe, 2015-12-08 In this book the time reversal focusing based on finite difference time domain FDTD method to localize source by using MATLAB GUI There are three analyses of free space model waveguide model and user define model for source location in a perfectly matched layer boundary The simulation results are evaluated to localize the source by using FDTD method in this book This book is appropriate for analyzing the time reversal mirror implementation We have shown the energy spectrum for propagation of acoustics wave in a room to focus by using array of transducers and source In these plots we first transmit the signals from source to the array of transducers and then the signals can be retransmitted back from array of transducers to the source by using time reverse algorithm The application areas of this work are mentioned in this work

Seismic Interferometry Deyan Draganov, Johan O. A. Robertsson, 2008 Seismic Interferometry History and Present Status SEG Geophysics Reprint Series No 26 shows that developments in seismic interferometry the methodology of generating new seismic responses by crosscorrelation have taken an enormous flight since the beginning of this century In 2006 the editors of this volume compiled a supplement to Geophysics dedicated to this new branch of science The 22 papers of the well received supplement recognized by one award for best paper and two honorable mentions for best paper in Geophysics and more than 100 citations in the first 20 months form the basis for this reprint volume The editors have added 50 papers from SEG and other journals including Science Physical Review and Geophysical Research Letters The book contains an editors introduction with extensive references and chapters on seismic interferometry without equations highlights of the history of seismic interferometry from 1968 until 2003 and a more detailed overview of the rapid developments since 2004 Seismic Interferometry is an invaluable source for researchers and students interested in the theory and applications of interferometry in geophysical exploration seismic and EM seismology ultrasonics and underwater acoustics

Intelligent Systems and Applications Kohei Arai, 2021-08-02 This book presents Proceedings of the 2021 Intelligent Systems Conference which is a remarkable collection of chapters covering a wider range of topics in areas of intelligent systems and artificial intelligence and their applications to the real world The conference attracted a total of 496 submissions from many academic pioneering researchers scientists industrial engineers and students from all around the world These submissions underwent a double blind peer review process Of the total submissions 180 submissions have been selected to be included in these proceedings As we witness exponential growth of computational intelligence in several directions and use of intelligent systems in everyday applications this book is an ideal resource for reporting latest innovations and future of AI The chapters include theory and application on all aspects of artificial intelligence from classical to intelligent scope We hope that readers find the book interesting and valuable it provides the state of the art intelligent methods and techniques for solving real world problems along with a vision of the future research *Advances In*

Underwater Acoustics, Structural Acoustics, And Computational Methodologies (In 4 Volumes) Sean F Wu, Steffen Marburg, 2025-04-29 This set of volumes encompasses the study of acoustics to diverse environments ranging from underwater and marine environments to structural and civil engineering computational models and aerospace engineering Each volume comprises peer reviewed publications in the related field of acoustics from the past decade arranged such as to review the existing literature examine new methodologies and then explore novel applications of pioneering acoustic principles With contributions by eminent acoustics researchers this set holds key insights for fellow acoustics researchers and engineers of any field impacted by acoustic phenomena Volume 1 s review chapters summarise theories like geoacoustic inversion as well as criticism of the Biot theory of propagation in fluid saturated porous solids while the new methodologies shown range from an efficient and stable coupled mode solution to a cell based smoothed radial point interpolation method The book concludes with promising applications like experimental evidence of horizontal refraction and bottom attenuation coefficient inversion Volume 2 reviews topics including radiation boundary conditions for the Helmholtz equation and analytical interpretation of the early literature on the theory of vibrations The methodologies range from coupled boundary element and energy flow method as well as sound radiation of a line source The work concludes with promising applications like Lamb Waves in a poroelastic plate and experimental validations of reconstructed excitation forces acting inside a solid enclosure Volume 3 provides summaries of theories including the benchmark study on eigenfrequencies of fluid loaded structures and the Burton and Miller method while the new methodologies presented range from a coupled boundary element and energy flow method to an efficient approach to the simulation of acoustic radiation The volume concludes with promising applications like a comparison of transient infinite elements and transient Kirchhoff integral methods as well as a fast multi frequency iterative acoustic boundary element method Volume 4 depicts the context of conventional methodologies including short wave components and Galbrun s equation while its new methodologies range from radiation and outflow boundary conditions for direct computation of acoustic and flow disturbances to the effect of airfoil shape on trailing edge noise The collection concludes with promising applications like helicopter noise predictions and conservative source interpolation methods for aeroacoustics

Tactile Sensing, Information, and Feedback via Wave Propagation Yitian Shao,2022-02-24 A longstanding goal of haptic engineering is to develop haptic interfaces that can provide realistic sensations of touch A fundamental step towards this goal is to understand what mechanical tactile signals the hand feels during daily touch interactions This book reveals the complex patterns of mechanical waves propagating throughout the hand that can be elicited even by simple touch interactions which helps in expanding existing knowledge of tactile function beyond the region of near skin object contact and inspires new designs for haptic sensing and feedback technologies The first part of this book describes new methods for capturing dynamic spatially distributed tactile signals in the whole hand during natural hand interactions The second part characterizes these signals and evaluates how well and how efficiently they encode the information of touch relating to the transmission of mechanical waves in hand tissues The final part demonstrates how these findings can be utilized to create novel haptic effects and tactile displays Tactile Sensing Information and Feedback via Wave Propagation provides a unique view of tactile sensing and feedback and will appeal to researchers engineers and students who are interested in learning cutting edge haptic science and technology

Recent Advances in Information, Communications and Signal Processing Andy W. H. Khong,Yong Liang Guan,2022-09-01 Research in information communications and signal processing has brought about new services applications and functions in a large number of fields which include consumer electronics biomedical devices and defence These applications play an important role in advancing technologies to enhance human life in general Recent Advances in Information Communications and Signal Processing aims to give students researchers and engineers information pertaining to recent advances in these fields In terms of research in signal processing topics the two chapters included in this book have a strong emphasis on advances in algorithmic development in the biomedical and human computer interfaces domain areas More specifically the use of deep learning for placental maturity staging is discussed as well as the use of vibration analysis for localising impacts on surfaces for human computer applications In terms of communications signal processing advances in new wireless communication such as NOMA non orthogonal multiple access and millimetre wave antenna design for 5G cellular mobile radio as well as innovations in LDPC low density parity check code decoding and networking coding are featured
