Understanding Epoch Cosmic Reionization Astrophysics:

Understanding the Epoch of Cosmic Reionization Andrei Mesinger, 2015-11-28 The dawn of the first stars galaxies and black holes signaled a fundamental milestone in our Universe's evolution the Epoch of Reionization The light from these galactic ancestors began spreading out ionizing virtually every atom in existence Our Universe transitioned from darkness to light from cold to hot from simple and boring to the wondrous cosmic zoo we see around us today Despite its importance observations of reionization have been few and their interpretation has been highly controversial Fortunately this is rapidly changing We will soon enter the Big Data era of this mysterious epoch driven by an upcoming wave of observations with state of the art telescopes as well as new sophisticated analysis tools The aim of this volume is to summarize the current status and future outlook of the reionization field We bring together leading experts in many sub disciplines highlighting the measurements that will illuminate our understanding of reionization and the cosmic dawn i 21cm interferometry ii high redshift quasar spectra iii high redshift galaxy surveys iv primary and secondary anisotropies of the Cosmic Microwave Background v high resolution studies of the metal content of early galaxies We seek a roadmap to interpreting the wealth of upcoming observations What is the best use of limited observational resources How do we develop theoretical tools tailored for each observation Ultimately what will we learn about the epoch of reionization and our galactic ancestors **Panel Reports**—**"New Worlds, New Horizons in Astronomy and Astrophysics"** National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Board on Physics and Astronomy, Committee for a Decadal Survey of Astronomy and Astrophysics, Program Prioritization Panels, Science Frontiers Panels, 2011-06-18 Every 10 years the National Research Council releases a survey of astronomy and astrophysics outlining priorities for the coming decade The most recent survey titled New Worlds New Horizons in Astronomy and Astrophysics provides overall priorities and recommendations for the field as a whole based on a broad and comprehensive examination of scientific opportunities infrastructure and organization in a national and international context Panel Reports New Worlds New Horizons in Astronomy and Astrophysics is a collection of reports each of which addresses a key sub area of the field prepared by specialists in that subarea and each of which played an important role in setting overall priorities for the field The collection published in a single volume includes the reports of the following panels Cosmology and Fundamental Physics Galaxies Across Cosmic Time The Galactic Neighborhood Stars and Stellar Evolution Planetary Systems and Star Formation Electromagnetic Observations from Space Optical and Infrared Astronomy from the Ground Particle Astrophysics and Gravitation Radio Millimeter and Submillimeter Astronomy from the Ground The Committee for a Decadal Survey of Astronomy and Astrophysics synthesized these reports in the preparation of its prioritized recommendations for the field as a whole These reports provide additional depth and detail in each of their respective areas Taken together they form an essential companion volume to New Worlds New Horizons A Decadal Survey of Astronomy and Astrophysics The book of panel reports will be useful to managers of programs of research

Lyman-alpha as an Astrophysical and Cosmological Tool Mark Dijkstra, J. Xavier Prochaska, Masami Ouchi, Matthew Hayes, 2019-11-12 The hydrogen Lyman alpha line is of utmost importance to many fields of astrophysics This UV line being conveniently redshifted with distance to the visible and even near infrared wavelength ranges it is observable from the ground and provides the main observational window on the formation and evolution of high redshift galaxies Absorbing systems that would otherwise go unnoticed are revealed through the Lyman alpha forest Lyman limit and damped Lyman alpha systems tracing the distribution of baryonic matter on large scales and its chemical enrichment We are living an exciting epoch with the advent of new instruments and facilities on board of satellites and on the ground Wide field and very sensitive integral field spectrographs are becoming available on the ground such as MUSE at the ESO VLT The giant E ELT and TMT telescopes will foster a quantum leap in sensitivity and both spatial and spectroscopic resolution to the point of being able perhaps to measure directly the acceleration of the Hubble flow In space the JWST will open new possibilities to study the Lyman alpha emission of primordial galaxies in the near infrared As long as the Hubble Space Telescope will remain available the UV restframe properties of nearby galaxies will be accessible to our knowledge Therefore this Saas Fee course appears very timely and should meet the interest of many young researchers
