Understanding Forest Disturbance and Spatial Pattern Michael A. Wulder, Steven E. Franklin, 2007 **Global**

Perspectives on Sustainable Forest Management Dr. Clement A. Okia, 2012-04-25 This book is dedicated to global perspectives on sustainable forest management. It focuses on a need to move away from purely protective management of forests to innovative approaches for multiple use and management of forest resources. The book is divided into two sections: the first section with thirteen chapters deals with the forest management aspects, while the second section with five chapters is dedicated to forest utilization. This book will fill the existing gaps in the knowledge about emerging perspectives on sustainable forest management. It will be an interesting and helpful resource to managers, specialists, and students in the field of forestry and natural resources management.

Contemporary Approaches in Urbanism and Heritage Studies Rokhsaneh Rahbariyan Yazdani, Editor, 2021-08-01 This book is an intellectual discourse and a concise compendium of current research in Architecture and Urbanism. Primarily, it is a book of readings of 24 chapters. The book brings together theories, manifestos, and methodologies on contemporary architecture and urbanism to raise the understanding for the future of architecture and urban planning. Overall, the book aims to establish a bridge between theory and practice in the built environment. Thus, it reports on the latest research findings and innovative approaches, methodologies for creating, assessing, and understanding of contemporary built environment.

Learning Landscape Ecology Sarah E. Gergel, Monica G. Turner, 2017-03-30 This title meets a great demand for training in spatial analysis tools accessible to a wide audience. Landscape ecology continues to grow as an exciting discipline with much to offer for solving pressing and emerging problems in environmental science. Much of the strength of landscape ecology lies in its ability to address challenges over large areas over spatial and temporal scales at which decision making often occurs. As the world tackles issues related to sustainability and global change, the need for this broad perspective has only increased. Furthermore, spatial data and spatial analysis, core methods in landscape ecology, are critical for analyzing land cover changes worldwide. While spatial dynamics have long been fundamental to terrestrial conservation strategies, land management, and reserve design, mapping and spatial themes are increasingly recognized as important for ecosystem management in aquatic, coastal, and marine systems. This second edition is purposefully more applied and international in its examples, approaches, perspectives, and contributors. It includes new advances in quantifying landscape structure and connectivity such as graph theory, as well as labs that incorporate the latest scientific understanding of ecosystem services, resilience, social ecological landscapes, and even seascapes. Of course, as before, the exercises emphasize easy-to-use, widely available software. <http://sarahgergel.net/learning-landscape-ecology/>
