A Simple Logical Key to Explain Our Physical Universe Michael L. MacLaughlin,2017-07-26 How does the universe work This question has vexed some of the greatest minds for millennia but is also a question many of us have asked ourselves throughout our lives If you are not a physicist but want to feel comfortable in your own mind that you understand the universe you live in then this little book is for you Using accessible language to explain complex ideas Michael MacLaughlin provides you with a simple key to understanding our universe from the smallest particles to the greatest galaxies Challenging conventional explanations the author takes you on a journey that will expand your knowledge and imagination and leave you with a sense of awe at the beautiful simplicity that the universe uses to create even the most complex of its forms From the subatomic level to the mystery of black holes from the limits of the solar system to the limits of your imagination this is a book for everyone who has ever stood beneath the stars and wondered how *Discover the Big Bang and the Secrets of Our Universe. a New Theory* Saoussan Kallel-Jallouli,2018-05-23 The Big Bang theory asserts that our universe space and time was created out of a giant explosion called the Big Bang In this paper we shall try to find out about the origin of this explosion and to prove that apparently it doesn't violate the first law of thermodynamics contrary to what is thought We shall see that it is a natural phenomenon Thus we will be able to solve all the problems related to the Big Bang theory What came before the Big Bang How could have the universe been created How can it expand uniformly What is Dark Energy that is supposed to be the big challenge that causes acceleration of the universe What is Dark Matter Where do the relic neutrinos

that fill the universe come from What is the origin of the cosmic microwave background photons What is the cause of temperature anisotropies that are observed in the Cosmic Microwave Background radiations CMBR What is the cause of CMBR polarization What is space What is time Can we guess how time can flow Can we speak about absolute space We will explain how the first star was born and understand how the Coriolis Effect is necessary for the building of many structures in the universe To do that we need many disciplines Mathematical modeling Astronomy Physics Chemistry Geology Weather Besides we need to recall some physical and chemical properties of water and to introduce many new definitions related to geology and weather So that we can have a better understanding of our universe **The Simple Universe** Ian

Brewster, Ken Shiwram, 2003 No one knows how the universe will end but we do have a pretty good idea how it started Everyone is familiar with the Big Bang theory but most of us are a little vague as to the details In a similar manner we all know the name Albert Einstein he is the one who invented Relativity which we all know about but are perhaps a little hard pressed to describe in any detail This is a book for average people that is you and me We've all been led to believe that in order to understand science you need a high forehead and a shirt pocket full of writing implements But that is not really true The book walks you through it from atomic physics right through to astronomy with colourful graphics and understandable text The authors have shown us that the universe is indeed understandable Einstein called it comprehensible and we won't argue with him Modern physics has undertaken a dedicated search for a theory that will knit relativity and quantum theory into one unified field theory In other words the search is on for a set of physical laws that will account for the behaviour of both atoms and whole galaxies This would be a Unified Field Theory also called the Theory of Everything TOE This book will show you in everyday language both the known factors and the unknowns waiting to be answered The authors have also undertaken to enlighten us by providing the historical context of the quest to understand our universe They have even addressed the issues of Creationism versus Science showing us that there is really no conflict involved This and much more are logically presented even such startling concepts as multiple universes all in a way that anyone can understand If you have an interest in understanding the universe this is a good place to start because it takes a complex subject and makes it completely understandable
