Unified Architectural Theory:

Unified Architectural Theory: Form, Language, Complexity Nikos A. Salingaros, 2017-06-05 **Unified Architectural Theory** Nikos Angelos Salingaros, 2013-12 Unified Architectural Theory re-invents architecture by uncovering its forgotten languages. Organized in 44 sections, this book contains lecture notes and readings from a course based on Christopher Alexander's *The Nature of Order* Book 1 and using Salingaros' *A Theory of Architecture*. It chronicles research results that can change our built environment for the better. Unified Architectural Theory is an innovative approach to the basis of architecture, permitting individual students and architects to assert their creativity in pursuing adaptive and sustainable design. The Czech and Nepali versions are offered by publishers in those countries. German and Spanish versions are underway. Selected chapters translated into Arabic, Portuguese, Spanish, and Urdu are available online. [The SAGE Handbook of Architectural Theory](#) C. Greig Crysler, Stephen Cairns, Hilde Heynen, 2012-01-20 Offers an intense scholarly experience in its comprehensiveness, its variety of voices, and its formal organization; the editors took a risk, experimented, and have delivered a much-needed resource that upends the status quo. *Architectural Histories*, journal of the European Architectural History Network. Architectural theory interweaves interdisciplinary understandings with different practices, intentions, and ways of knowing. This handbook provides a lucid and comprehensive introduction to this challenging and shifting terrain and will be of great interest to students, academics, and practitioners alike. Professor Iain Borden, UCL Bartlett School of Architecture. In this collection, architectural theory expands outward to interact with adjacent discourses such as sustainability, conservation, spatial practices, virtual technologies, and more. We have in *The Handbook of Architectural Theory* an example of the extreme generosity of architectural theory. It is a volume that designers and scholars of many stripes will welcome. K. Michael Hays, Eliot Noyes, Professor of Architectural Theory, Harvard University. *The SAGE Handbook of Architectural Theory* documents and builds upon the most innovative developments in architectural theory over the last two decades. Bringing into dialogue a range of geographically, institutionally, and historically competing positions, it examines and explores parallel debates in related fields. The book is divided into eight sections: Power, Difference, Embodiment, Aesthetics, Pleasure, Excess, Nation, World, Spectacle, History, Memory, Tradition, Design, Production, Practice, Science, Technology, Virtuality, Nature, Ecology, Sustainability, City, Metropolis, Territory. Creating openings for future lines of inquiry and establishing the basis for new directions for education, research, and practice, the book is organized around specific case studies to provide a critical, interpretive, and speculative enquiry into the relevant debates in architectural theory. **Athens** Stavros Kousoulas, 2025-09-05 Focusing on the city of Athens, this book examines architecture as something that produces culture and ideology rather than the opposite. Therefore, this book aims to complement architectural and urban theories that are based only on historical overviews or typological assumptions; to do so, it boldly opens architectural discourse to philosophy, affect theory, and social and cognitive sciences. By examining Athens after its denomination as Greek capital in 1834, the

moments actors and transformations that assist the individuation of the Athenian urban ecologies are problematised. Opting for theoretical speculations, the readers will witness architecture as a collective equipment that produces modes of life that can either enhance or diminish our collective potentials. As such, the ambition of this book is to provide the theoretical and methodological groundings for thorough extrapolations on how new collectivities can be produced. Readers of this book will be exposed to a transdisciplinary approach that identifies and addresses shared problems and concerns regarding the production of contemporary urban environments. This book will also explore theoretical innovations that can inform and trigger new ways of speculative thinking and offers a non-reductionist account of the development of Athens from the perspective of multiple architectural technicities. This book will be of interest to researchers and students of architecture, architectural theory, architectural history and philosophy.

Islamic Heritage Architecture IV S. Hernandez, 2022-09-13
Islamic architecture has enriched design with a wide variety of structural shapes including among others unique arches, a wide variety of vaults and domes which allow for new forms to be developed. This volume deals with the design of many types of buildings in Islamic countries including not only the better known public buildings like mosques, mausoleums, citadels and forts but also houses and gardens, engineering works such as bridges and dams, irrigation systems and many others which have also had a profound impact on society. There is much to learn from past experiences to arrive at solutions that are environmentally sound and sustainable in the long term. As conventional energy resources become scarce, the Islamic design heritage can offer invaluable lessons on how to deal in an efficient manner with cases of hard and extreme environments. Traditional architecture and urban environments in most Islamic countries are now being eroded by overemphasis on a global type of architecture and city planning. Consequently, many regions are losing their identity. The included research reviews these developments in the light of what the classical Islamic urban designs and architectures have to offer modern society.

Art and Architecture for Congregational Worship Richard S. Vosko, 2019-09-26
A deep strain of tribal politics is dividing societies around the globe. Organized religions are also coping with scandals, disappointments and polarizing ideologies. The history of Christianity reveals that such frictions deeply wound the church. Fr. Richard S. Vosko recognizes that liturgical buildings are metaphorical expressions of the people of God. He proposes in a relational way that when all physical and psychological boundaries in a place of worship are removed, people will discover a common ground. Building on theological foundations and design principles, Vosko envisions what an egalitarian servant church can look like. In a bold but thoughtful manner, he presents progressive insights into the fields of church art and architecture.

Design Patterns and Living Architecture Nikos A. Salingaros, 2017-07-25
Classicism and the Construction of Capital Cities Richard Alston, 2025-05-15
Exploring the intriguing interplay between tradition and modernity in the 19th-century capitals of London, Athens and Rome, Richard Alston delves into the political and architectural choices that shaped these cities as representations of self-consciously modern nations. Politicians and architects invested in classical styles in their efforts to

break with traditions and assert new values Classical style was employed to address questions of urbanism and nation citizenship and belonging and history and civilization The story of 19th century architectural Classicism offers a compelling narrative of utopian dreams clashing with authoritarian politics to generate the complexities of modern urban landscapes Through these three case studies this book illuminates how Classicism became a potent tool for expressing elitist nationalism in London excluding Greeks from their own capital in Athens and reinforcing aspiration to a technocratic new Rome As such grand visions collided with modern urban realities Alston unravels the mythic allure and ultimate failure of these utopian endeavours This book presents a riveting exploration of the architectural choices that reflected the aspirations and challenges of a rapidly changing world leaving a lasting impact on the capitals and their nations Urban Experience and Design Justin B. Hollander, Ann Sussman, 2020-10-15 Embracing a biological and evolutionary perspective to explain the human experience of place Urban Experience and Design explores how cognitive science and biometric tools provide an evidence based foundation for architecture and planning Aiming to promote the creation of a healthier and happier public realm this book describes how unconscious responses to stimuli outside our conscious awareness direct our experience of the built environment and govern human behavior in our surroundings This collection contains 15 chapters including contributions from researchers in the US the UK the Netherlands France and Iran Addressing topics such as the impact of eye tracking analysis and seeing beauty and empathy within buildings Urban Experience and Design encourages us to reframe our understanding of design including the narrative of how modern architecture and planning came to be in the first place This volume invites students academics and scholars to see how cognitive science and biometric findings give us remarkable 21st century metrics for evaluating and improving designs even before they are built Architecture Spiro N. Pollalis, 1991 *Essays in Architectural Theory* Ananda Kentish Coomaraswamy, 1995 Ananda K Coomaraswamy 1877 1947 pioneered one form of cultural studies early in this century not as an anthropologist but as an advocate of the idea of Tradition His penetrating attention to both the substance and mind of India's great civilizations has provided several generations of Asian and European scholars a variety of models that of the geologist carefully attentive to facts and strata that of the art historian embedding chronology and variation within regional and cultural contexts and that of the philosopher weaving together texts from both eastern and western traditions to demonstrate what he in his later years called a philosophia perennis This second volume Ananda K Coomaraswamy *Essays in Architectural Theory* presents in consecutive form the essays that best represent Coomaraswamy's rapidly developing thinking on the hermeneutics of architecture its why not how These can best be understood in the order in which they were written As Michael W Meister says in his Preface Only by being presented in such a fashion can Coomaraswamy's architectural ideas accumulate a structure comparable to their substance **Demolishing Whitehall** Adam Sharr, Stephen Thornton, 2016-12-05 This book is about a lost world albeit one less than 50 years old It is the story of a grand plan to demolish most of Whitehall London's historic government district and

replace it with a ziggurat section megastructure built in concrete In 1965 the architect Leslie Martin submitted a proposal to Charles Pannell Minister of Public Building and Works in Harold Wilson's Labour government for the wholesale reconstruction of London's Government Centre Still reeling from war damage its eighteenth and nineteenth century palaces stood as the patched up headquarters of an imperial bureaucracy which had once dominated the globe Martin's plan by no means modest in conception scope or scale proposed their replacement with a complex that would span the roads into Parliament Square reframing the Houses of Parliament and Westminster Abbey The project was not executed in the manner envisaged by Martin and his associates although a surprising number of its proposals were implemented But the unbuilt architecture is examined here for its insights into a distinctive moment in British history when a purposeful technological future seemed not just possible but imminent apparently sweeping away an anachronistic Edwardian establishment to be replaced with a new meritocracy forged in the white heat of technology The Whitehall plan had implications well beyond its specific site It was imagined by its architects as a scientific investigation into ideal building forms for the future an important development in their project to unify science and art For the political actors it represented a tussle between government departments between those who believed that Britain needed to discard much of its Victorian and Edwardian decoration in the name of professionalization and those who sought to preserve its ornate finery Demolishing Whitehall investigates these tensions between ideas of technology and history science and art socialism and elitism
