Code Name Rules

- Code names must begin with a letter.
- Subsequent characters should only be letters, numbers, or underscore characters.
- Good practice makes names shorter than 25 characters, and subnames, underscores, for spaces.
- Avoid names that are the same as well-known names in Excel or other Office applications, such as **WORKBOOK**.

VBA Editor Tips

- The Project Explorer pane is best used to navigate between code windows.
- Use the code window's **Procedure** drop list (see Navigating Code Window Lists) to navigate between subroutines in a long code window.
- Click the Project Explorer folder icon (see Project Explorer) to toggle between a grouped list (folders) and a single list. Making this change in any one Office application will affect all Office applications.
- To maximize the code window, close all other windows and panes.
- To directly edit a macro in Excel or Word, press **ALT**, **F11**, select the macro name, then **CTRL**, **SHIFT**, **F10**, and **F10** to show the VBA Editor and return to the Office application.

Using Code Window Lists

The Object and Procedure drop lists at the top of any code window. They can be used to navigate between subroutines or macro events triggered code.

1. Select an appropriate item from the Object drop list.
2. Then select an appropriate item from the Procedure drop list.

Write code into the newly created subroutine. For example, a subroutine can be created to calculate the sum of two numbers. The **OBJECT** drop list shows the **OBJECT** drop list, and the **PROCEDURE** drop list shows the **PROCEDURE** drop list.
