
VECTOR

VECTORS AND SCALARS :

The physical quantities (we deal with) are generally of two types:

Scalar Quantity:

A quantity which has magnitude but no sense of direction is called scalar quantity (or scalar), e.g., mass, volume, density, speed etc.

Vector Quantity:

A quantity which has magnitude as well as a sense of direction in space and obey the laws of vector algebra is called a vector quantity, e.g., velocity, force, displacement etc.

Notation and Representation of Vectors :

Vectors are represented by $\vec{a}$, $\vec{b}$, $\vec{c}$ and their magnitude (modulus) are represented by a , b , c , or $|\vec{a}|$, $|\vec{b}|$, $|\vec{c}|$. The vectors are represented by directed line segments.

For example, line segment $\overrightarrow{OP}$ represents a vector with magnitude OP (length of line segment), arrow denotes its direction. O is initial point and P is terminal point, also called as head & tail of vector respectively.

KINDS OF VECTORS :

1. **Zero or null vector :** A vector whose magnitude is zero is called zero or null vector and it is denoted by $\vec{0}$ or $\vec{0}$. The initial and terminal points of the directed line segment representing zero vector are coincident and its direction is arbitrary.

2. **Unit vector :** A vector of unit magnitude is called a unit vector. A unit vector in the direction of $\vec{a}$ is denoted by $\hat{a}$. Thus

$$\hat{a} = \frac{\vec{a}}{|\vec{a}|} = \frac{\text{Vector } a}{\text{Magnitude of } a}$$

Note :

- (i) $|\hat{a}| = 1$
- (ii) Unit vectors parallel to x- axis, y- axis and z- axis are denoted by $\hat{i}$, $\hat{j}$ and $\hat{k}$ respectively.
- (iii) Two unit vectors may not be equal unless they have the same direction.

3. **Equal Vectors :** Two vectors $\vec{a}$ and $\vec{b}$ are said to be equal, if

- (a) $|\vec{a}| = |\vec{b}|$
- (b) they have the same sense of direction

4. **Co-initial vectors:** Vectors having same initial point.

The Basics of Item Response Theory Using R Frank B. Baker, Seock-Ho Kim, 2017-04-25 This graduate level textbook is a tutorial for item response theory that covers both the basics of item response theory and the use of R for preparing graphical presentation in writings about the theory Item response theory has become one of the most powerful tools used in test construction yet one of the barriers to learning and applying it is the considerable amount of sophisticated computational effort required to illustrate even the simplest concepts This text provides the reader access to the basic concepts of item response theory freed of the tedious underlying calculations It is intended for those who possess limited knowledge of educational measurement and psychometrics Rather than presenting the full scope of item response theory this textbook is concise and practical and presents basic concepts without becoming enmeshed in underlying mathematical and computational complexities Clearly written text and succinct R code allow anyone familiar with statistical concepts to explore and apply item response theory in a practical way In addition to students of educational measurement this text will be valuable to measurement specialists working in testing programs at any level and who need an understanding of item response theory in order to evaluate its potential in their settings
