Fuses

Fuses need to be appropriately rated for the circuit. For example if you have all LED headlights and marker lights you might be able to use 3A or 5A fuses.

For the Grey Road Light Neutral a fuse is not needed, however I usually put a 40 Amp fuse in as a lock. (It's also a handy security trick... remove that fuse and none of the road lights will work)

CAR - CARAVAN Switch

On restoration projects or trailers of vintage caravans it might be desirable to retain the original features of the CAR/CARAVAN switch.

This switch was to allow the user to select either caravan battery or if plugged in to the vehicle the car battery to power the caravan.

The Car/Caravan switch found on older caravans will be limited in current capacity. Two reasons, the first being the voltage drop between the car battery and caravan and the second by the size of the fuse in the leisure battery charging circuit. (Max 20A)

On a lot of caravans the switch was rated at about 10 Amps and no relay was installed. Some had a centre off position. If you are restoring and using the same switch I would strongly recommend you install a relay to do the heavy switching.

This relay must be powered from the vehicle leisure battery charging circuit and use the charging circuit neutral. This is so if the vehicle is disconnected, the relay will drop out and the caravan will return to being powered by the caravan leisure battery.

WARNING!

If you intend installing an inverter or have an inverter **DO NOT INSTALL THIS SWITCH OR RELAY!**
