Kreowski, Ugo Montanari, Fernando Orejas, Grzegorz Rozenberg, Gabriele Taentzer, 2005-02-04 By presenting state of the art research results on various aspects of formal and visual modeling of software and systems this book commemorates the 60th birthday of Hartmut Ehrig The 24 invited reviewed papers are written by students and collaborators of Hartmut Ehrig who are established researchers in their fields Reflecting the scientific interest and work of Hartmut Ehrig the papers fall into three main parts on graph transformation algebraic specification and logic and formal and visual modeling *Neural*

Networks in Robotics George A. Bekey, Kenneth Y. Goldberg, 2012-12-06 Neural Networks in Robotics is the first book to present an integrated view of both the application of artificial neural networks to robot control and the neuromuscular models from which robots were created The behavior of biological systems provides both the inspiration and the challenge for robotics The goal is to build robots which can emulate the ability of living organisms to integrate perceptual inputs smoothly with motor responses even in the presence of novel stimuli and changes in the environment The ability of living systems to learn and to adapt provides the standard against which robotic systems are judged In order to emulate these abilities a number of investigators have attempted to create robot controllers which are modelled on known processes in the brain and musculo skeletal system Several of these models are described in this book On the other hand connectionist artificial neural network formulations are attractive for the computation of inverse kinematics and dynamics of robots because they can be trained for this purpose without explicit programming Some of the computational advantages and problems of this approach are also presented For any serious student of robotics Neural Networks in Robotics provides an indispensable reference to the work of major researchers in the field Similarly since robotics is an outstanding application area for artificial neural networks Neural Networks in Robotics is equally important to workers in connectionism and to students for sensor/monitor control in living systems *Cognitive Technology: Instruments of Mind* Meurig

Nehaniv, Kerstin Dautenhahn, 2003-05-15 Cognitive Technology Instruments of Mind Cognitive Technology is the study of the impact of technology on human cognition the externalization of technology from the human mind and the pragmatics of tools It promotes the view that human beings should develop methods to predict analyse and optimize aspects of human tool relationship in a manner that respects human wholeness In particular the development of new tools such as virtual environments new computer devices and software tools has been too little concerned with the impacts these technologies will have on human cognitive and social capacities Our tools change what we are and how we relate to the world around us They need to be developed in a manner that both extends human capabilities while ensuring an appropriate cognitive fit between organism and instrument The principal theme of the CT 2001 conference and volume is declared in its title Instruments of Mind Cognitive Technology is concerned with the interaction between two worlds that of

the mind and that of the machine In science and engineering this interaction is often explored by posing the question how can technology be best tailored to human cognition But as the history of technological developments has consistently shown cognition is also fashioned by technology Technologies as diverse as writing electricity generation and the silicon chip all illustrate the profound and dynamic impact of technology upon ourselves and our conceptions of the world Artificial Life Christopher G.
