Perspectives on Word Formation Alexander Onysko, Sascha Michel, 2010-03-26 While cognitive linguistics has become established as a comprehensive research paradigm over the last three decades it has so far hardly contributed to investigations into processes of lexical creation as traditionally captured in research on word formation In light of this the volume at hand is the first one to take a step ahead towards illuminating diverse aspects of word formation from cognitive perspectives The book combines contributions to the 2nd International Cognitive Linguistics Conference of the German Cognitive Linguistics Association with a selection of invited papers by scholars working on issues of word formation and cognitive linguistics This selection is guided by pluralism in both methodology and topics Thus some contributions are of a primarily theoretical nature discussing for example recombination as a model of word formation and a taxonomy of word formation processes as construction types Several articles address interface issues such as word formation and phrasal constructions word formation and inflection as well as phonology and word formational patterns The majority of the studies focuses on individual types of word formation compounding affixation and conversion and they contribute to reframing our understanding of these processes With a focus on mostly Germanic languages Afrikaans Dutch English German Luxembourgish and Norwegian data driven analyses include corpus linguistic investigations elicited data psycholinguistic experiments and computational linguistic applications A few contributions follow a mainly introspective path of reasoning based on the discussion of selected examples as in the analysis of creative compounds Overall the volume provides a rich array of topics emerging under the umbrella of cognitive linguistic thought and established patterns and processes of word formation The various studies add to a yet marginal body of research in cognitive word formation and thus advance our awareness about the benefits of applying cognitive linguistic thoughts for investigating processes of lexical creation **Sell**
