Financial Services, Financial Crisis and General European Contract Law Stefan Grundmann, Ye?im M. Atamer, 2011-01-01 Speculation is rife on the origins of the worldwide financial crisis of 2008 with a preponderance focusing on alleged shortcomings in corporate governance This book offers a distinct yet complementary perspective that the most useful path to follow if we want to understand what happened and forestall its happening again is through an analysis of contract relationships specifically banking contracts entered into in the financial services sector considered under the rubric of contract law rather than company law Because banking is the area of European contract law which is most thoroughly developed banking contracts can be seen as paradigmatic of typical assumptions and shortcomings often examined in the more general debate on contract law And indeed the very thoroughness of European banking contract law makes it a promising ground on which to build effective preventive measures In this book thirteen noted scholars recognizing that modern contract law must take into account global markets and risks consider banking contracts within networks and within mass transactions Always attending to the long term relationships that characterize financial services contracts they focus on such cross sector issues as the following rule setting and the question of who should best regulate and at which level networks of contracts as the backbone of a market economy the complex interplay between market regulation and traditional contract law avoiding erroneous assumptions about the future development of prices the passing on of the risk via securitization rating relationships affected by conflicts of interests remuneration problems core duties of information and advice in an agency relationship in services fiduciary duties of loyalty and care types of clients and level of protection differentiation in information available on various markets and the question of enforcement
