An Analysis of Daniel Kahneman's Thinking, Fast and Slow Jacqueline Allan, 2018-02-21 Thinking Fast and Slow by Daniel Kahneman offers a general audience access to over six decades of insight and expertise from a Nobel Laureate in an accessible and interesting way Kahneman's work focuses largely on the problem of how we think and warns of the dangers of trusting to intuition which springs from fast but broad and emotional thinking rather than engaging in the slower harder but surer thinking that stems from logical deliberate decision making Written in a lively style that engages readers in the experiments for which Kahneman won the Nobel Thinking Fast and Slow's real triumph is to force us to think about our own thinking

How Should We Rationally Deal with Ignorance? Nadja El

Kassar, 2024-09-27 This book addresses two questions that are highly relevant for epistemology and for society What is ignorance and how should we rationally deal with it It proposes a new way of thinking about ignorance based on contemporary and historical philosophical theories In the first part of the book the author shows that epistemological definitions of ignorance are quite heterogeneous and often address different phenomena under the label ignorance She then develops an integrated conception of ignorance that recognizes doxastic attitudinal and structural constituents of ignorance Based on this new conception she carves out suggestions for dealing with ignorance from the history of philosophy that have

largely been overlooked virtue theoretic approaches based on Aristotle and Socrates consequentialist approaches derived from James and deontological approaches based on Locke Clifford and Kant None of these approaches individually provide a satisfying approach to the task of rationally dealing with ignorance and so the author develops an alternative maxim based answer that extends Kant's maxims of the *sensus communis* to the issue of ignorance The last part of the book applies this maxim based answer to different contexts in medicine and democracies How Should We Rationally Deal with Ignorance will appeal to scholars and advanced students working in epistemology political philosophy feminist philosophy and the social sciences

What We Think About When We Try Not To Think About Global Warming Per Espen Stoknes, 2015 Today about 98 percent of scientists affirm that climate change is human made and about 2 percent still question it Despite that overwhelming majority though about half the population of rich countries like ours choose to believe the 2 percent And paradoxically this large camp of deniers grows even larger as

more and more alarming proof of climate change has cropped up over the last decades This disconnect has both climate scientists and activists scratching their heads growing anxious and responding usually by repeating more facts to win the argument But the more climate facts pile up the greater the resistance to them grows and the harder it becomes to enact measures to reduce greenhouse gas emissions and prepare communities for the inevitable change ahead Is humanity up to the task It is a catch 22 that starts says psychologist and climate expert Per Espen Stoknes from an inadequate understanding of the way most humans think act and live in the world around them With dozens of examples he shows how to retell the story of climate change and apply communication strategies more fit for the task Publisher s description

Leadership in Modern War James Stuart Brooks,2023-06-30 How would you react under fire Fight or flight What if you were in charge of a squad of men with their lives in your hands The next decision you make could be fatal for you and your comrades or could be devastating to your enemy The wrong decision could haunt you for the rest of your career and beyond The decisions taken by commanders in the field are analyzed in a detached manner by historians But what for example was the thought process of a reconnaissance tank officer operating far ahead of any supporting troops in the Second World War or a machine gunner trying to differentiate friend from foe in the Gulf War How might a British infantry officer in the Iraq War deal with the situations he faced in combat or a platoon commander in the War Against ISIS where the enemy had no fear of dying and even embraced it How do you come to terms with the consequences of your decisions the right ones as well as the tragically wrong ones James Brooks presents defining moments such as these to put you in the shoes of the decision maker You can decide when to cross a bridge in Taliban territory whether to land a helicopter under fire to rescue Marines in danger and how to lead a command center targeting ISIS through air strikes These decisions compared with what the veterans did themselves teach more about humanity than they do about the tactics of war and serve as lessons for the decisions we face in everyday life In a career that traced the rise and fall of ISIS from 2014 to 2021 James served in the US Marine Corps as a scout sniper platoon commander intelligence officer and counter propaganda mission lead After two deployments to the Middle East and a year and a half fighting ISIS propaganda online James returned to his hometown to teach a subject called Perspectives in Modern War to high school seniors Building from the stories of his own service as well as those of the men and women he fought alongside in *Leadership in Modern War* James captures these lessons and explores just what it is like to be on the front line facing your foe Warfare has changed in the twenty first century but the enduring lessons of conflict remain the same It is brutal and unforgiving but it is also character defining

Metamodern Leadership James Surwillo, 2017-07-11 Metamodern Leadership outlines the seven values that identify the character of our future leaders based on the circumstances that make the Millennial Generation who they are It is at once an attempt to implore youth to seize their potential by tying their values to ancient wisdom as well as a warning to everyone else to understand the impacts of disregarding the inevitable tendencies of a very distinct new demographic This is the untold story of the personal responsibility required of the Millennial Generation against the messaging and memes that portray them as entitled and lazy It is an optimistic and pragmatic interpretation on the leadership mandates in the near future The ancient virtue of leadership required broad knowledge as the basis for critical thinking and self examination The late twentieth century required myopic versions of leadership which neglected the truths of centuries of wisdom Our younger generations will lead and follow based on new foundations that seem counterintuitive to most yet will be the status quo within a decade This distinction will lead to pragmatism and problem solving for the future rather than the dogma and gridlock of today We will require a generation of leaders who can once again link the complexities of the future with the ancient wisdom of progress
