Three Seductive Ideas:

Three Seductive Ideas Jerome Kagan, 2000-04-07 Do the first two years of life really determine a child's future development Are human beings like other primates only motivated by pleasure And do people actually have stable traits like intelligence fear anxiety and temperament This book the product of a lifetime of research by one of the founders of developmental psychology takes on the powerful assumptions behind these questions and proves them mistaken Ranging with impressive ease from cultural history to philosophy to psychological research literature Jerome Kagan weaves an argument that will rock the social sciences and the foundations of public policy Scientists as well as lay people tend to think of abstract processes like intelligence or fear as measurable entities of which someone might have more or less This approach in Kagan's analysis shows a blindness to the power of context and to the great variability within any individual subject to different emotions and circumstances Infant determinism is another widespread and dearly held conviction that Kagan contests This theory with its claim that early relationships determine lifelong patterns underestimates human resiliency and adaptiveness both emotional and cognitive and of course fails to account for the happy products of miserable childhoods and vice versa The last of Kagan's targets is the vastly overrated pleasure principle which he argues can hardly make sense of unselfish behavior impelled by the desire for virtue and self respect the wish to do the right thing Written in a lively style that uses fables and fairy tales history and science to make philosophical points this book challenges some of our most cherished notions about human nature

Three Big Bangs Holmes Rolston III, 2010-10-11 By dividing the creation of matter, energy, life, and mind into three big bangs, Holmes Rolston III brings into focus a history of the universe that respects both scientific discovery and the potential presence of an underlying intelligence. Matter, energy, appears initially in simpler forms but with a remarkable capacity for generating heavier elements. The size and expansion rate of the universe, the nature of electromagnetism, gravity, and nuclear forces enable the explosion of life on Earth. DNA discovers, stores, and transfers information, generating billions of species. Cognitive capacities escalate, and with neural sentience, this results in human genius. A massive singularity, the human mind gives birth to language and culture, increasing the brain's complexity and promoting the spread of ideas. Ideas generate ideals which lead life to take on spirit. The nature of matter, energy, genes, and their genesis, therefore, encourages humans to wonder where they are, who they are, and what they should do.

The Unfinished Revolution John Abbott, Terry Ryan, 2001 If you believe it is possible for communities schools parents and businesses to come together around helping all children become lifelong learners then read this book In *The Unfinished Revolution* authors John Abbott and Terry Ryan argue that the so called crisis in education is really a crisis in childhood and that the unit of change is not the school but rather the larger community Drawing on their experiences of working with schools community leaders researchers parents and business leaders in the United States the United Kingdom and Canada the authors show how current models of education based on ideas about learning from the industrial age cannot by themselves bring out the full potential of all children They maintain that the schools we have inherited from the industrial age are structured to develop a mass of students who at best are equipped with basic skills and the ability to follow orders but only a small cadre of creative lifelong learners To create learning environments that help all children take control of their own learning the authors propose a constructivist and apprentice based approach that takes full account of our current understanding about how humans actually learn They urge going with the grain of the brain as a way of breaking down today's highly partitioned system of education Abbott and Ryan make the case that communities have the power to help education blend into a seamless web in which learning opportunities permeate the entire culture This form of dynamic learning will not be seen as a system but rather as a way of life Learning will be something that we all recognize encourage and actively support through formal education community participation and the power of the connected world of information communication and technology A utopian vision No The authors describe societies undergoing a revolution in thinking and working that despite disruptions offers ways to cope with ongoing social political and economic changes This revolution is

unfinished as long as education systems lag behind these larger transformations In this book the authors address that lag by charting a course across disciplines to connect learning to what happens outside the classroom ultimately producing lifelong learners who can take full advantage of today's increasingly open and dynamic societies Understanding Attachment Jean Mercer, 2005-11-30 Is maternal instinct fact or fiction What special challenges do adoptive parents face What kind of daycare is better one with many caregivers or one with few When is separation anxiety normal in a child Do the experiences of early childhood always influence our ability to build and maintain social relationships as adults Understanding Attachment helps to answer these questions and many others This book is perfect for the reader who wants or needs a thorough understanding of attachment but does not have time to indulge in lengthy study Parents child care providers teachers nurses social workers attorneys therapists students and counselors will all appreciate this work Is maternal instinct fact or a myth What special challenges do adoptive parents face What kind of daycare is better one with many caregivers or one with few When is separation anxiety normal in a child and when is it a sign of a developmental problem Do the experiences of early childhood always influence our ability to build and maintain social relationships as adults Understanding Attachment helps to answer these questions and many others This book is perfect for the reader who wants or needs a thorough understanding of attachment but does not have the time to indulge in lengthy study Parents child care providers teachers nurses social workers attorneys therapists students and counselors will all appreciate this work Mercer defines attachment and related terms discusses the history of the idea and describes ways in which this aspect of emotional life can be measured She explains developmental change and the way attachment continues to alter from infancy to adulthood The importance of social experiences with parents and other caregivers is emphasized Outcomes of good and poor attachment experiences are discussed and there is material on attachment disorders The book concludes with a description of recent work that gives a new perspective on attachment *Oversold and Underused* Larry CUBAN, 2009-06-30 Impelled by a demand for increasing American strength in the new global economy many educators public officials business leaders and parents argue that school computers and Internet access will improve academic learning and prepare students for an information based workplace But just how valid is this argument In *Oversold and Underused* one of the most respected voices in American education argues that when teachers are not given a say in how the technology might reshape schools computers are merely souped up typewriters and classrooms continue to run much as they did a generation ago In his studies of early childhood high school and university classrooms in Silicon Valley Larry Cuban found that students and teachers use the new technologies far less in the classroom than they do at home and that teachers who use computers for instruction do so infrequently and unimaginatively Cuban points out that historical and organizational economic contexts influence how teachers use technical innovations Computers can be useful when teachers sufficiently understand the technology themselves believe it will enhance learning and have the power to shape their own curricula But these conditions can't be met without a broader and

deeper commitment to public education beyond preparing workers More attention Cuban says needs to be paid to the civic and social goals of schooling goals that make the question of how many computers are in classrooms trivial Raising America Ann Hulbert,2011-01-26 Since the beginning of the twentieth century millions of anxious parents have turned to child rearing manuals for reassurance Instead however they have often found yet more cause for worry In this rich social history Ann Hulbert analyzes one hundred years of shifting trends in advice and discovers an ongoing battle between two main approaches a child centered focus on warmly encouraging development versus a sterner parent centered emphasis on instilling discipline She examines how pediatrics psychology and neuroscience have fueled the debates but failed to offer definitive answers And she delves into the highly relevant and often turbulent personal lives of the popular advice givers from L Emmett Holt and Arnold Gesell to Bruno Bettelheim and Benjamin Spock to the prominent and ever conflicting experts of today **The Brain Development Revolution** Ross A. Thompson,2023-09-07 The science of human development informs our thinking about children and their development The Brain Development Revolution asks how and why has brain development become the major lens for understanding child development and its consequences It describes the 1997 I Am Your Child campaign that engaged public attention through a sophisticated media communications effort a White House conference and other events It explores the campaign s impact including voter initiatives to fund early childhood programs and a national campaign for prekindergarten education but also several missed opportunities The study examines why brain development compels our attention why we are but shouldn t be neurodeterminists and the challenges of communicating developmental brain science This book examines the framing of the brain development story the selectivity of the messaging and overpromising the results of early programs Lastly it discusses proposals for how science communication can be improved to better serve children and the public Ethics in an Age of Terror and Genocide Kristen Renwick Monroe,2012 How should Augustine Plato Calvin Kant Nietzsche and Bonhoeffer be read today in light of postcolonial theory and twenty first century understandings This book offers a reader friendly introduction to Christian liberationist ethics by having scholars from the margins explore how questions of race and gender should be brought to bear on twenty four classic ethicists and philosophers Each short chapter gives historical background for the thinker describes that thinker s most important contributions then raises issues of concern for women and persons of color *How Customers Think* Gerald Zaltman,2003 Despite the time and money spent on market research 60% to 80% of new offerings fail
