Topical Drug Delivery Formulations David W. Osborne, Anton H. Amann, 1989-11-27 **The Art and Science of Dermal Formulation Development** Marc B. Brown, Adrian C. Williams, 2019-03-01

The Art and Science of Dermal Formulation Development is a comprehensive guide to the theory and practice of transdermal and topical formulation development covering preclinical studies evaluation and regulatory approval. It enables the reader to understand the opportunities and challenges in developing products and how risks can be mitigated. Over the last 25 years, expertise in this area has declined whilst drug delivery systems for other administration routes have developed significantly. The advantages offered by transdermal and topical drug delivery remain compelling for sectors including the pharmaceutical industry, personal care and cosmetics. This text addresses the dearth of expertise and discusses how skin can be a route of delivery and the processes in formulation development but how such an application is very different to that used for oral IV and other administration routes.

Key Features Presents a practical guide for both industry and academia. Focuses on and draws together the fundamental principles behind transdermal and topical drug delivery. Illustrates the practicalities of formulation design using key case studies. Gives an understanding of the skin as a route of delivery and how formulation development for such application differs from that for other administration routes.

National Library of Medicine Current Catalog National Library of Medicine (U.S.), 1990 Extraction of Capsaicin: Formulation and Evaluation of a Transdermal Patch Simachal Panda, Ridhi Singh, Ajit Kumar Ngangbam, 2024-11-21. Ethyl ester prodrug of non-sulfhydryl angiotensin converting enzyme (ACE) inhibitor capsaicin is the proposed model drug. These hypothesized TDDs managed ventricular arrhythmias and had short biological half-life, low oral bioavailability, dosage and molecular weight for better drug absorption. The suggested transdermal patch combines a slow

release calcium channel blocker with a sustained release capsaicin angiotensin converting enzyme inhibitor The prepared capsaicin film was characterized by optical checking smoothness color transparency and flexibility thickness of polymeric films mass deviation uniformity or texture surface pH tensile strength cracking acceptance power water ingestion amount swelling ratio wetness and in vitro drug release study Hydrophilic polymers chitosan increased water soluble capsaicin spreadability and regulated drug release by 95.5% in 12 hours The polymeric films TLF6 were chosen for their look tensile strength percentage elongation folding endurance swelling ratio moisture content moisture uptake nature drug content and in vitro drug release study parameters Release kinetics showed that the produced film followed diffusion kinetics and released immediately The release kinetic investigation showed that the patch followed super case II diffusion kinetics with sustained release over time After regression analysis slope values were calculated from the graph and r^2 values indicated linearity
