Topology With Applications: Topological Spaces Via Near And Far Somashekhar A Naimpally, James F Peters, 2013-02-21 The principal aim of this book is to introduce topology and its many applications viewed within a framework that includes a consideration of compactness completeness continuity filters function spaces grills clusters and bunches hyperspace topologies initial and final structures metric spaces metrization nets proximal continuity proximity spaces separation axioms and uniform spaces This book provides a complete framework for the study of topology with a variety of applications in science and engineering that include camouflage filters classification digital image processing forgery detection Hausdorff raster spaces image analysis microscopy paleontology pattern recognition population dynamics stem cell biology topological psychology and visual merchandising It is the first complete presentation on topology with applications considered in the context of proximity spaces and the nearness and remoteness of sets of objects A novel feature throughout this book is the use of near and far discovered by F Riesz over 100 years ago In addition it is the first time that this form of topology is presented in the context of a number of new applications **Transactions on Rough Sets XXI** James F. Peters, Andrzej Skowron, 2019-02-01 The LNCS journal Transactions on Rough Sets is devoted to the entire spectrum of rough sets related issues from logical and mathematical foundations through all aspects of rough set theory and its applications such as data mining knowledge discovery and intelligent information processing to relations between rough sets and other approaches to uncertainty vagueness and incompleteness such as fuzzy sets and theory of evidence Volume XXI in the series is a continuation of a number of research streams that have grown out of the seminal work of Zdzislaw Pawlak during the first decade of the 21st century **Computational Proximity** James F. Peters, 2016-04-20 This book introduces computational proximity CP as an algorithmic approach to finding nonempty sets of points that are either close to each other or far apart Typically in computational proximity the book starts with some form of proximity space topological space equipped with a proximity relation that has an inherent geometry In CP two types of near sets are considered namely spatially near sets and descriptively near sets It is shown that connectedness boundedness mesh nerves convexity shapes and shape theory are principal topics in the study of nearness and separation of physical as well as abstract sets CP has a hefty visual content Applications of CP in computer vision multimedia brain activity biology social networks and cosmology are included The book has been derived from the lectures of the author in a graduate course on the topology of digital images taught over the past several years Many of the students have provided important insights and valuable suggestions The topics in this monograph introduce many forms of proximities with a computational flavour especially what has become known as the strong contact relation many nuances of topological spaces and point free geometry [Encyclopedia of Image Processing](#) Phillip A. Laplante, 2018-11-08 The Encyclopedia of Image Processing presents a vast collection of well written articles covering image processing fundamentals e g color theory fuzzy sets cryptography and applications e g geographic

information systems traffic analysis forgery detection Image processing advances have enabled many applications in healthcare avionics robotics natural resource discovery and defense which makes this text a key asset for both academic and industrial libraries and applied scientists and engineers working in any field that utilizes image processing Written by experts from both academia and industry it is structured using the ACM Computing Classification System CCS first published in 1988 but most recently updated in 2012

New Trends in Applied Analysis and Computational Mathematics Susanta Kumar Paikray,Hemen Dutta,John N. Mordeson,2021-06-28 The volume contains original research papers as the Proceedings of the International Conference on Advances in Mathematics and Computing held at Veer Surendra Sai University of Technology Odisha India on 7 8 February 2020 It focuses on new trends in applied analysis computational mathematics and related areas It also includes certain new models image analysis technique fluid flow problems etc as applications of mathematical analysis and computational mathematics The volume should bring forward new and emerging topics of mathematics and computing having potential applications and uses in other areas of sciences It can serve as a valuable resource for graduate students researchers and educators interested in mathematical tools and techniques for solving various problems arising in science and engineering

Transactions on Rough Sets XVII James F. Advances in Feature Selection for Data and Pattern Recognition Urszula Stańczyk,Beata Zielosko,Lakhmi C. Jain,2017-11-16 This book presents recent developments and research trends in the field of feature selection for data and pattern recognition highlighting a number of latest advances The field of feature selection is evolving constantly providing numerous new algorithms new solutions and new applications Some of the advances presented focus on theoretical approaches introducing novel propositions highlighting and discussing properties of objects and analysing the intricacies of processes and bounds on computational complexity while others are dedicated to the specific requirements of application domains or the particularities of tasks waiting to be solved or improved Divided into four parts nature and representation of data ranking and exploration of features image shape motion and audio detection and recognition decision support systems it is of great interest to a large section of researchers including students professors and practitioners

Foundations of Computer Vision James F. Peters,2017-03-17 This book introduces the fundamentals of computer vision CV with a focus on extracting useful information from digital images and videos Including a wealth of

methods used in detecting and classifying image objects and their shapes it is the first book to apply a trio of tools computational geometry topology and algorithms in solving CV problems shape tracking in image object recognition and detecting the repetition of shapes in single images and video frames Computational geometry provides a visualization of topological structures such as neighborhoods of points embedded in images while image topology supplies us with structures useful in the analysis and classification of image regions Algorithms provide a practical step by step means of viewing image structures The implementations of CV methods in Matlab and Mathematica classification of chapter problems with the symbols easily solved and challenging and its extensive glossary of key words examples and connections with the fabric of CV make the book an invaluable resource for advanced undergraduate and first year graduate students in Engineering Computer Science or Applied Mathematics It offers insights into the design of CV experiments inclusion of image processing methods in CV projects as well as the reconstruction and interpretation of recorded natural scenes
