Reassessing Human Resource Management Paul Blyton, Peter J. Turnbull, 1992-09-21 Drawing on a wide range of organizational examples this book brings a new balance to assessing the role and impact of HRM. It looks at the core assumptions of an HRM perspective and at what happens when organizations seek to implement HRM. The contributors show that there are a number of tensions and contradictions inherent in an HRM concept that raise central issues for practice. They demonstrate that HRM is one approach to employee management that will tend to prevail in certain contexts and conditions rather than universally. Specific themes include HRM and competitive success, organizational culture and HRM, HRM flexibility and decentralization, reward management and HRM. Just in Time manufacturing and new technology, HRM and trade unions, HRM as the management of managerial meaning.

Industries and Global Competition Bram Bouwens, Pierre-Yves Donzé, Takafumi Kurosawa, 2017-09-18 Changes in the dynamics of economic activities since the last decades of the 20th century have yielded major changes in the composition of industries and the division of labor and production across different regions of the world. Despite these shifts in the global economy, some industries have remained competitive even without relocating their operations overseas. *Industries and Global Competition* examines how and why the specificities of certain industries and firms determined their choice of location and competitiveness. This volume identifies the major drivers of this process and explains why some firms and industries moved to other parts of the world while others did not. Relocation was not the sole determinant of the success or failure of firms and industries. Indeed, some were able to reinvent themselves at their original location and build new competitive advantages. The path that each industry or firm took varied. This book argues that the specific characteristics of each industry defined the conditions of competitiveness and provide a wide range of cases as illustrations. Aimed at scholars, researchers and academics in the fields of business history, international business and related disciplines, *Industries and Global Competition* examines the unique questions: How and why did the specificities of certain industries and firms determine their choice of location and competitiveness? Chapter 11 of this book is freely available as a downloadable Open Access PDF at <http://www.taylorfrancis.com> under a Creative Commons Attribution-NonCommercial-NoDerivatives 4.0 International license.

This book contains in-depth articles by scholars from within and beyond economics who continue on the Clark project or address actual problems calling for economic responsibility in the light of his approach.
