Downey, 2014 [Think Bayes](#) Allen B. Downey, 2021-05-18 If you know how to program you re ready to tackle Bayesian statistics With this book you ll learn how to solve statistical problems with Python code instead of mathematical formulas using discrete probability distributions rather than continuous mathematics Once you get the math out of the way the Bayesian fundamentals will become clearer and you ll begin to apply these techniques to real world problems Bayesian statistical methods are becoming more common and more important but there aren t many resources available to help beginners Based on undergraduate classes taught by author Allen B Downey this book s computational approach helps you get a solid start Use your programming skills to learn and understand Bayesian statistics Work with problems involving estimation prediction decision analysis evidence and Bayesian hypothesis testing Get started with simple examples using coins dice and a bowl of cookies Learn computational methods for solving real world problems [Metadata Standards and Web Services in Libraries, Archives, and Museums](#) Erik Mitchell, 2015-10-21 Metadata in library information environments is evolving rapidly This book provides readers with a set of tools for designing developing and implementing metadata rich information systems while also examining the challenges and opportunities in this field As the world of library and information science has developed in the age of digital information metadata and metadata rich information systems have become increasingly important and more complex and confusing This book will enable students instructors and practitioners in the information science field to understand how these new systems and standards will impact their careers and professions Author Erik Mitchell explores definitions of information and presents an up to date consideration of user needs in information systems to provide necessary background before moving on to in depth discussions of metadata information organization practice and information system design Each chapter incorporates hands

on activities to complement the reading material allowing readers to build technical skills alongside the important conceptual learning in this content area Readers will gain conceptual understanding and skills that will allow them to analyze and transform structured data develop metadata rich information systems and design systems with user needs and digital literacies in mind This book is intended for library and information science students taking information organization metadata or other core digital cataloging classes but will also be highly useful for professionals seeking to learn the details of metadata systems and theory using a hands on approach

Probably Overthinking It Allen B. Downey, 2023-12-06 Teacher data scientist and blogger Allen B Downey knows well that the human mind has both an innate ability to understand statistics and to be fooled by them Statistically speaking you will be less popular than your friends arrive at a train station during a gap in service and fail to find a running mate in a race But more than surprising us errors in statistical thinking Downey shows can have a huge impact Statistical confusion has led to incorrect patient prognoses caused mistakes in predicting disasters like earthquakes hurt vaccination programs hindered social justice efforts and led to dubious policy decisions Written for those who may have once taken a statistics course but now forget almost everything they've learned the book includes a diversity of examples that use real data and have real world impacts Building understanding incrementally Downey engagingly and accessibly helps readers understand what we might learn when we get the mathematics right and the consequences when we get it all wrong

Bayesian Modeling and Computation in Python Osvaldo A. Martin, Ravin Kumar, Junpeng Lao, 2021-12-28 Bayesian Modeling and Computation in Python aims to help beginner Bayesian practitioners to become intermediate modelers It uses a hands on approach with PyMC3 Tensorflow Probability ArviZ and other libraries focusing on the practice of applied statistics with references to the underlying mathematical theory The book starts with a refresher of the Bayesian Inference concepts The second chapter introduces modern methods for Exploratory Analysis of Bayesian Models With an understanding of these two fundamentals the subsequent chapters talk through various models including linear regressions splines time series Bayesian additive regression trees The final chapters include Approximate Bayesian Computation end to end case studies showing how to apply Bayesian modelling in different settings and a chapter about the internals of probabilistic programming languages Finally the last chapter serves as a reference for the rest of the book by getting closer into mathematical aspects or by extending the discussion of certain topics This book is written by contributors of PyMC3 ArviZ Bambi and Tensorflow Probability among other libraries
