

Vertical Farming, Plant Factory Market Shares, Strategies, and Forecasts, Worldwide, 2014 to 2020

Description:

Marketable products are poised to achieve significant growth as the food supply for the world starts to adopt automated processes. Grow lights have become more sophisticated and less expensive to run as solar and wind energy are adopted by greenhouses and plant factories.

Plant Factory (PF), vertical farming is a closed environment, in which plants are grown under lights in shelves stacked one on another. All the elements needed for plant growth are artificially controlled, a process that removes detrimental influences such as pesticides and poor weather conditions. Traditional agriculture lives at the mercy of the elements. A plant factory is run based on science. Science is used to produce plants based on carefully controlled spectrum best for plant growth, to produce plants of a fixed quality, quantity, cost, time to harvest, and tuned to control the sale price.

Plant factory weed control is able to achieve crop yield increases. Robot technology is deploying machines for weed control, promising to improve crop yields. Robots make the crops safer by eliminating or virtually eliminating herbicides. Onstream processing system solutions and robots achieve automation of process. Robots meet a myriad of hygiene and safety regulations, work tirelessly 24 hours a day, and reduce human workers of physically arduous tasks. Robots contribute to the freshness, variety and quality of food. Projects are ongoing.

High value crops are a target of agricultural robotic development. What could be tastier than a strawberry, perfectly formed, and perfectly ripened? New plant factories that grow fruits and vegetables on shelves indoors are able to improve the delivery of consistent quality food, and to implement efficiency in managing food production.

Strawberries are a high profit crop. A new generation of plant factories have just been born making it forever spring in the strawberry growing business. Strawberry harvesters with the world's most advanced technology to give maximum performance in a plant factory. Harvesting robots can replace the productivity of the farming business. Growers can get the best results in a berry farm using automated process. Automated picking collection systems improve labor productivity, grow speed and aging to harvest operations.

Food factories produce organic vegetables. This represents a next step in the application of automated process to everyday life. Automated process for farming provides immediate help for food stores. Plant factories support farming practices that are not dependent on the climate. Food factories produce organic vegetables 24 hours a day. With the land suitable for farming depleting quickly, new types of farming are evolving.

Plant Factories Market Driving Forces:

- Demand for ability to grow food consistently
- Demand for ability to grow food locally
- Can grow food in warehouses
- Can grow food in the home
- Dedicating space that is efficient for producing food
- Fresh, sanitary food available consistently
- Food factories
- Ability to produce organic vegetables
- Ability to produce vegetables 24 hours a day
- Land available for farming depleting quickly
- New types of farming are evolving
- Growing of vegetables indoors all year round

A plant factory allows the growing of vegetables indoors all year round. It is a system that artificially creates the environment necessary for plants to grow by controlling the amount of carbon dioxide, air, and light from light-emitting diodes (LEDs).
