Tools For Modeling Systems Learning The Language Of Patterns:

Tools for Modeling Systems Peter R Bergethon, Symmetry Learning Systems, 2013-03-31 Tools for Modeling Systems introduces The Language of Patterns as a path to systems analysis and modeling The Language of Patterns is a descriptive modeling language used at each step of the scientific knowledge construction process or Progression of Inquiry Using these fundamental ideas the Language of Patterns develops the tools for critical thinking and analysis that underlie all knowledge construction The Language of Patterns is used to characterize explore and understand any system of interest Scientific inquiry uses the Language of Patterns at every level from observation through to model building hypothesis testing and experimental verification Critical thinking skills and the process of scientific inquiry are practiced anytime the Language of Patterns is used This simple text and practice workbook introduces the fundamentals of systems analysis scientific thinking and critical analysis in a non technical and easily accessible method It includes a coherent series of graphical analyzers to guide learning and analysis

Designing Organizational Systems Richard Baskerville, Marco De Marco, Paolo Spagnoletti, 2012-10-01 This book is dedicated to the memory of Professor Alessandro Sandro D Atri who passed away in April 2011 Professor D Atri started his career as a brilliant scholar interested in theoretical computer science databases and more generally information processing systems He journeyed far in various applications such as human computer interaction human factors ultimately arriving at business information systems and business organisation after more than 20 years of research based on problem solving Professor D Atri pursued the development of an interdisciplinary culture in which social sciences systems design and human sciences are mutually integrated Rather than retrospection this book is aimed to advance in these directions and to stimulate a debate about the potential of design research in the field of information systems and organisation studies with an interdisciplinary approach Each chapter has been selected by the Editorial Board following a double blind peer review process The general criteria of privileging the variety of topics and the design science orientation and or empirical works in which a design research approach is adopted to solve various field problems in the management area In addition several chapters contribute to the meta discourse on design science research

A New GeoComputation Pattern and Its Application in Dual-Evaluation Wensheng Zhou, 2021-04-24 This book introduces Document As System DAS a new GeoComputation pattern which is also a new GIS application pattern It uses the GeoComputation language G language to describe and execute complex spatial analysis model in the MS Word environment which solves the bottleneck problem of GIS application makes GIS become a popular tool for spatial data analysis from the spatial data visualization tool and plays an important role in the wide application of GIS technology This book systematically introduces the theory related to the new GeoComputation pattern and the application example in the dual evaluation of territorial and spatial planning which can be used as a learning and reference manual for GIS related professionals and business personnel engaged in the dual evaluation of territorial and spatial planning

Content Ontology Design Patterns: Qualities, Methods, and Tools Karl

Hammar, 2017-09-06 Ontologies are formal knowledge models that describe concepts and relationships and enable data integration information search and reasoning Ontology Design Patterns ODPs are reusable solutions intended to simplify ontology development and support the use of semantic technologies by ontology engineers ODPs document and package good modelling practices for reuse ideally enabling inexperienced ontologists to construct high quality ontologies Although ODPs are already used for development there are still remaining challenges that have not been addressed in the literature These research gaps include a lack of knowledge about 1 which ODP features are important for ontology engineering 2 less experienced developers preferences and barriers for employing ODP tooling and 3 the suitability of the eXtreme Design XD ODP usage methodology in non academic contexts This dissertation aims to close these gaps by combining quantitative and

qualitative methods primarily based on five ontology engineering projects involving inexperienced ontologists. A series of ontology engineering workshops and surveys provided data about developer preferences regarding ODP features, ODP usage methodology, and ODP tooling needs. Other data sources are ontologies and ODPs published on the web which have been studied in detail. To evaluate tooling improvements, experimental approaches provide data from comparison of new tools and techniques against established alternatives. The analysis of the gathered data resulted in a set of measurable quality indicators that cover aspects of ODP documentation, formal representation or axiomatisation, and usage by ontologists. These indicators highlight quality trade-offs, for instance between ODP Learnability and Reusability, or between Functional Suitability and Performance Efficiency. Furthermore, the results demonstrate a need for ODP tools that support three novel property specialisation strategies and highlight the preference of inexperienced developers for template-based ODP instantiation, neither of which are supported in prior tooling. The studies also resulted in improvements to ODP search engines based on ODP-specific attributes. Finally, the analysis shows that XD should include guidance for the developer roles and responsibilities in ontology engineering projects, suggestions on how to reuse existing ontology resources, and approaches for adapting XD to project-specific contexts.
