Uno de los principios epistemológicos de valoración de la ciencia es que todo saber debe estar en la posesión de un objeto que causa motivación y aviva el conocimiento. Sin objeto no hay ciencia porque no tendríamos a esta a donde dirigir las preguntas y las soluciones. Cuando los objetos se presentan se da en el interior del hombre la intención de conocerlos y este motivado por la intención de generar conocimiento se interesa por todos o algunos aspectos, proyecciones, ingredientes o partes del objeto. Cada uno de esos aspectos es susceptible de ser predicado sea de manera lógica o empírica y de nuevo esto depende de las intenciones del hombre de sus deseos de sus anhelos de sus dudas de su quehacer de sus pretensiones en general de su vida como tal. Existen aspectos asociados a objetos que son susceptibles de medida, esto es que se les puede asignar un número real que los represente y también existen aspectos que son susceptibles de categorizarse, por ejemplo aquellos que se pueden poner en la categoría amor o en la categoría odio. Si se considera un conjunto de objetos de interés y de dichos objetos se considera, por ejemplo, un aspecto medible, se espera que en todos ellos la medida asociada sea diferente, objeto a objeto. Si bien la población de estudio es el conjunto formado por todos los objetos de interés, se puede asumir de manera típica que la población está conformada solo por el aspecto. La estadística es la ciencia que se encarga de modelar las poblaciones así pensadas, es decir, la estadística explica la manera en la cual se comporta un aspecto particular sobre un conjunto de objetos de interés. Por otra parte, cuando de manera empírica se toma un conjunto particular de objetos de la población típica y se estudia en dicho conjunto el aspecto de interés, se obtiene un conjunto de medidas o un conjunto de datos, las cuales pueden explicar la población típica. De esta manera, la estadística se ocupa de explicar los objetos en términos de sus aspectos mediante un subconjunto de una población de interés, es decir, la estadística se encarga de relacionar el mundo típico y práctico mediante modelos que permiten explicar algunos aspectos. Con el estudio de este libro se logra adquirir las bases típicas necesarias para comprender conceptos de estadística que permiten establecer relaciones entre el mundo típico y práctico. Además, cuando se está leyendo este texto se aprende a leer y escribir problemas de naturaleza estadística. De esta manera, además de construir las bases típicas de la inferencia estadística, este texto permite fortalecer otro tipo de competencias tales como la lectura y la escritura, así como el apropiamiento de procedimientos que son útiles en la práctica.
