International Plant Proteomics Organization (INPPO) World Congress 2014 Joshua L. Heazlewood, Jesús V. Jorrín-Novo, Ganesh Kumar Agrawal, Silvia Mazzuca, Sabine Lühje, 2017-02-08 The field of proteomics has advanced considerably over the past two decades The ability to delve deeper into an organism s proteome identify an array of post translational modifications and profile differentially abundant proteins has greatly expanded the

utilization of proteomics Improvements to instrumentation in conjunction with the development of these reproducible workflows have driven the adoption and application of this technology by a wider research community However the full potential of proteomics is far from being fully exploited in plant biology and its translational application needs to be further developed In 2011 a group of plant proteomic researchers established the International Plant Proteomics Organization INPPO to advance the utilization of this technology in plants as well as to create a way for plant proteomics researchers to interact collaborate and exchange ideas The INPPO conducted its inaugural world congress in mid 2014 at the University of Hamburg Germany Plant proteomic researchers from around the world were in attendance and the event marked the maturation of this research community The Research Topic captures the opinions ideas and research discussed at the congress and encapsulates the approaches that were being applied in plant proteomics

Biomolecular Data Rita R. Colwell, David G. Swartz, Michael Terrell MacDonell, 1989 During the last decade the unparalleled growth of biomolecular data particularly nucleic acid sequences has led to extraordinary breakthroughs in biotechnology But the accompanying development of specialized databases has inevitably resulted in restrictions for example in accessing data and manipulating it that could curb further advances in the biological sciences *Biomolecular Data* examines both the strengths and shortcomings of today's databases and explores a variety of proposals for developing advanced database systems that will help sustain scientific progress in the future The contributors including noted specialists in database management address issues such as improving quality control of data ensuring timeliness and reliability data documentation peer review computer education and training As *Biomolecular Data* makes clear the value of databases will continue to depend on both innovation in data management and cooperation among data managers scientists journal editors and sponsoring organizations
