Ballou, Katherine Ralls, Mark Eldridge, Michele R. Dudash, Charles B. Fenster, Robert C. Lacy, Paul Sunnucks, 2019-10-23 The habitats of most species have been fragmented by human actions isolating small populations that consequently develop genetic problems Millions of small isolated fragmented populations are likely suffering from inbreeding depression and loss of genetic diversity greatly increasing their risk of extinction Crossing between populations is required to reverse these effects but managers rarely do so A key reason for such inaction is that managers are often advised to manage populations in isolation whenever molecular genetic methods indicate genetic differences among them Following this advice will often doom small populations to extinction when the habitat fragmentation and genetic differences were caused by human activities A paradigm shift is required whereby evidence of genetic differentiation among populations is a trigger to ask whether any populations are suffering genetic problems and if so whether they can be rescued by augmenting gene flow Consequently there is now an urgent need for an authoritative practical guide to facilitate this paradigm shift in genetic management of fragmented populations Mader's Reptile and

relationship to what is considered the real wild Even the most immersive and naturalistic zoos critics maintain are inherently contrived and inauthentic environments Zoo animals diet care and reproduction are under pervasive human control with natural phenomena like disease and death kept mostly hidden from public view Furthermore despite their growing commitment to conservation and education zoos are entertainment providers that respond to visitors expectations and preferences What would a wilder zoo one that shows the public a wider range of ecological processes look like Is it achievable or even desirable What roles can or should zoos play in encouraging humanity to find meaningful connections with wild animals and places *A Wilder Kingdom* is a provocative and reflective examination of the relationship between zoos and the wild It gathers a premier set of multidisciplinary voices from animal studies and psychology to evolutionary biology and environmental journalism to consider the possibilities and challenges of making zoos wilder In so doing the contributors offer new insights into the future of the wild beyond zoos and our relationship to wild species and places across the

Now completely revised A history of the modern zoo In this revised edition of *Savages and Beasts* Nigel Rothfels traces the origins of the modern zoo to the efforts of the German entrepreneur Carl Hagenbeck the most successful dealer in exotic animals in the nineteenth century Building from his core business in animals Hagenbeck eventually became even more

famous for his large ethnographic exhibitions and circus ventures When Hagenbeck opened his Animal Park near Hamburg Germany in 1907 he brought together all his business interests in a revolutionary zoological park He moved wild animals out of their cages and into natural landscapes and in the process invented a new way of imagining captivity Through the use of theatrical scenery the animals and people performing in his ethnographic exhibitions appeared to be living in their native lands This revised edition addresses ethical concerns about the representation of indigenous peoples and animals and includes a host of new images and photographs By examining Hagenbeck's enterprises *Savages and Beasts* demonstrates how ideas about the role of zoos and the nature of animal captivity developed in the late nineteenth century Rothfels provides a much needed historical perspective on the connections between the development of modern zoos and their colonial histories
