Some of the answers below may differ in format but have the same value as your result. Please check with your instructor if a specific format is desired.

Chapter 9

- 9-2.** Why are simplifying assumptions in equilibrium problems restricted to relationships that are sums or differences?

Answer:

To simplify equilibrium calculations, we sometimes assume that the concentrations of one or more species are negligible and can be approximated as 0.00 M. In a sum or difference assuming a concentration is 0.00 M leads to an appropriate result. In contrast, if we were to simplify an equilibrium constant expression by assuming one or more concentrations are zero, we would be multiplying or dividing by 0.00, which would render the expression meaningless.

- 9-4.** Why do molar concentrations of some species appear as multiples in charge-balance equations?

Answer:

A charge-balance equation is derived by relating the concentration of cations and anions
no. mol/L positive charge = no. mol/L negative charge

For a doubly charged ion, such as Ba^{2+} , the concentration of charge for each mole is twice the molar concentration of the Ba^{2+} . That is,

$$\text{mol/L positive charge} = 2[\text{Ba}^{2+}]$$

Thus, the molar concentration of all multiply charged species is always multiplied by the charge in a charge-balance equation.

- 9-5.** Write the mass-balance expressions for a solution that is

Solutions:

- (a) 0.2 M in HF.

$$0.20 = [\text{HF}] + [\text{F}^-]$$

- (c) 0.10 M in H_3PO_4 .

$$0.10 = [\text{H}_3\text{PO}_4] + [\text{H}_2\text{PO}_4^-] + [\text{HPO}_4^{2-}] + [\text{PO}_4^{3-}]$$

- (e) 0.0500 M in HClO_2 and 0.100 M in NaClO_2 .

$$0.0500 + 0.100 = [\text{HClO}_2] + [\text{ClO}_2^-]$$

$$[\text{Na}^+] = C_{\text{NaClO}_2} = 0.100 \text{ M}$$

Factory Physics Wallace J. Hopp, Mark L. Spearman, 2011-08-31 Our economy and future way of life depend on how well American manufacturing managers adapt to the dynamic globally competitive landscape and evolve their firms to keep pace A major challenge is how to structure the firm's environment so that it attains the speed and low cost of high volume flow lines while retaining the flexibility and customization potential of a low volume job shop The book's three parts are organized according to three categories of skills required by managers and engineers basics intuition and synthesis Part I reviews traditional operations management techniques and identifies the necessary components of the science of manufacturing Part II presents the core concepts of the book beginning with the structure of the science of manufacturing and a discussion of the systems approach to problem solving Other topics include behavioral tendencies of manufacturing plants push and pull production systems the human element in operations management and the relationship between quality and operations Chapter conclusions include main points and observations framed as manufacturing laws In Part III the lessons of Part I and the laws of Part II are applied to address specific manufacturing management issues in detail The authors compare and contrast common problems including shop floor control long range aggregate planning workforce planning and capacity management A main focus in Part III is to help readers visualize how general concepts in Part II can be applied to specific problems Written for both engineering and management students the authors demonstrate the effectiveness of a rule based and data driven approach to operations planning and control They advance an organized framework from which to evaluate management practices and develop useful intuition about manufacturing systems

Future of Airplane Factory George Nicholas Bullen, 2019-05-28 The Future of Airplane Factory Digitally Optimized Intelligent Airplane Factory defines the architecture key building blocks and roadmap for actualizing a future airplane factory FAF that is digitally optimized for intelligent airplane assembly They fit and

integrate with other FAF building blocks that aggregate to a Digitally Optimized Intelligent Airplane Factory DOIAF The word intelligent refers to the ability of a system to make right decisions and take right action in the highly dynamic and fluid environment of the modern airplane manufacturing space The event driven dynamics inherent in the complexity of this environment drive the need for expert knowledge which resides in intelligence systems incorporating the experience of experts Expert knowledge need not be smart brilliant or possess genius as long as the outcomes are derived from right decisions resulting in right actions applied rapidly to sustain an optimized factory enterprise Complete factory enterprise visibility requires a higher order of decision capability that current operating systems do not have A highly visible factory collects and displays data and information as it happens at a rate beyond the ability of humans and current systems to analyze process decide and act upon Expert systems are constructed to present humans with right decisions in the form of optimal choices for right actions by incorporating the knowledge of experts into the logic for the decision Structured Knowledge Based Expert Systems SKBES are incorporated in this book and defined as a critical component for full enterprise actionable visibility The power of the Digitally Optimized Intelligent Airplane Factory not only is found in its ability to unify the factory reduce touch labor improve quality and streamline throughput but it also enables a significant reduction in above the shop floor support and management Such an ecosystem frees the human to focus on the complexity of interpersonal responsibilities If the use of a DOIAF can be viewed as a holistic mechanism then the human can be the agent engaging with that mechanism improving negotiations for pricing contracts or other person to person events that require instinct and relationship

Factory, the Magazine of Management, 1925 Democracy in Action: Structures, Systems, and Struggles RAJEEV RUNGTA, DR. VIKAS GOEL, Preface Democracy in Action Structures Systems and Struggles is an exploration of one of humanity's most enduring and evolving ideals democracy This book seeks to illuminate not only the institutional frameworks and political philosophies that underpin democratic governance but also the social cultural and technological forces that continue to shape its practice across the world Democracy at its heart is not a static concept it is a living process of negotiation between power and people freedom and responsibility ideals and realities The book thus journeys through its origins evolution and modern complexities offering a comprehensive understanding of how democratic systems function adapt and sometimes falter Beginning with the intellectual foundations of democracy in ancient civilizations and moving through its modern transformations the chapters trace the interplay between constitutional structures electoral systems political parties and civic movements that give life to democratic governance From the design of representative institutions

to the pressures of globalization technology and media the text unpacks how democracy both shapes and is shaped by the societies that practice it In doing so it invites readers to reflect on the balance between institutions and individuals governance and participation rights and duties In today s world marked by populism polarization misinformation and the blurring of national boundaries the meaning of democracy is being re examined more urgently than ever This book acknowledges these tensions while remaining grounded in the belief that democracy s strength lies in its capacity for self correction dialogue and reform It also emphasizes the moral dimension of democracy its connection to human rights equality and justice drawing attention to the struggles and movements that have expanded its promise across continents and centuries Each chapter of Democracy in Action builds upon the last to provide a multidimensional perspective from the architecture of constitutions and the pulse of electoral systems to the voices of citizens activists and institutions that sustain the democratic fabric The final chapter turns toward the future posing critical questions about how democracy can endure and adapt in an era of artificial intelligence climate challenges and geopolitical shifts This book is intended for students scholars and citizens alike those who seek to understand not only how democracies are built but how they can be strengthened It is both a study and a call to action to view democracy not as a finished structure but as an ongoing struggle and shared responsibility a testament to the human pursuit of dignity representation and justice Authors Jamuna Devi Rajnish Lather Jyoti Janardhan Reddy Prof Dr Punit Goel *Getting Factory Automation Right* Edwin H. Baker,2013-08-27 Food manufacturing has evolved over the centuries from kitchen industries to modern sophisticated production operations A typical food factory includes the food processing and packaging lines the buildings and exterior landscaping and the utility supply and waste treatment facilities As a single individual is unlikely to possess all the necessary skills required to facilitate the design the task will undoubtedly be undertaken by an interdisciplinary team employing a holistic approach based on a knowledge of the natural and biological sciences most engineering disciplines and relevant legislation In addition every successful project requires a competent project manager to ensure that all tasks are completed on time and within budget This Handbook attempts to compress comprehensive up to date coverage of these areas into a single volume It is hoped that it will prove to be of value across the food manufacturing community The multi disciplinary nature of the subject matter should facilitate more informed communication between individual specialists on the team It should also provide useful background information on food factory design for a wider range of professionals with a more peripheral interest in the subject for example process plant suppliers contractors HSE specialists retailers consultants and financial institutions Finally it is hoped that it will also prove to be a valuable reference for students and instructors in the areas of food technology chemical engineering and mechanical engineering in particular
