Symposium Programme Committee Chair and Faculty Member International Space University e-mail: fujimori@isu.isunet.edu
M Rycroft Faculty Member International Space University e-mail: rycroft@isu.isunet.edu Building on the foundations provided by the International Space Station, now partially constructed and already in use in low Earth orbit, what will be the future directions of human spaceflight? This was the key question discussed from many viewpoints: technical, entrepreneurial, governmental, legal, at the seventh Annual Symposium held in Strasbourg, France, early in June 2002. Many ideas on the whys and the hows of our future exploration of the final frontier were put forward in a stimulating environment. The unique perspective of the International Space University (ISU), namely an interdisciplinary, international and intercultural perspective, enhanced both the presentations and the discussions. More than 150 people attended the Symposium, including the current members of the Master of Space Studies class, who are attending an 11-month course at ISU. They are young professionals

and postgraduate students who develop in depth some part of the broad Symposium theme in their parallel Team Projects Their final reports will be completed at the end of July 2002 and will be published independently 1 Beyond the ISS The Future of Human Spaceflight Keynote Address A Summary The Need for a New Vision E Vallerani Advanced Logistic Technology Engineering Center The Italian Gateway to the ISS Corso Marche 79 Torino 10146 Italy e mail vallerani ernesto spacegate altec

Solar and Space Physics and Its Role in Space Exploration National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on the Assessment of the Role of Solar and Space Physics in NASA's Space Exploration Initiative, 2004-11-11 In February 2004 the President announced a new goal for NASA to use humans and robots together to explore the Moon Mars and beyond In response to this initiative NASA has adopted new exploration goals that depend in part on solar physics research These actions raised questions about how the research agenda recommended by the NRC in its 2002 report *The Sun to the Earth and Beyond* which did not reflect the new exploration goals would be affected As a result NASA requested the NRC to review the role solar and space physics should play in support of the new goals This report presents the results of that review It considers solar and space physics both as aspects of scientific exploration and in support of enabling future exploration of the solar system The report provides a series of recommendations about NASA's Sun Earth Connections program to enable it to meet both of those goals
