Modeling collaborations in self-adaptive systems of systems Wätzoldt, Sebastian,Giese, Holger,2015-04-30 An increasing demand on functionality and flexibility leads to an integration of beforehand isolated system solutions building a so called System of Systems SoS

Furthermore the overall SoS should be adaptive to react on changing requirements and environmental conditions Due SoS are composed of different independent systems that may join or leave the overall SoS at arbitrary point in times the SoS structure varies during the systems lifetime and the overall SoS behavior emerges from the capabilities of the contained subsystems In such complex system ensembles new demands of understanding the interaction among subsystems the coupling of shared system knowledge and the influence of local adaptation strategies to the overall resulting system behavior

arise In this report we formulate research questions with the focus of modeling interactions between system parts inside a SoS Furthermore we define our notion of important system types and terms by retrieving the current state of the art from literature Having a common understanding of SoS we discuss a set of typical SoS characteristics and derive general requirements for a collaboration modeling language Additionally we retrieve a broad spectrum of real scenarios and frameworks from literature and discuss how these scenarios cope with different characteristics of SoS Finally we discuss the state of the art for existing modeling languages that cope with collaborations for different system types such as SoS
