

Direct Acting

NOTE: Flow path arrows omitted to show multi purpose nature of valve. How the valve is piped will determine flow paths.

Action: Solenoid pushes spool directly, compressing spring

ADVANTAGES:

- Valve shifting force is independent from supply pressure - -- allows multi purpose piping of valve --- constant solenoid force
- Simple design --- three moving parts (solenoid armature, spool, spring)
- Override acts upon spool directly --- positive feedback
- Operates with vacuum, pressure or dual supplies
- Generally faster response time to shift valve, especially in non-rubber packed valves.

DISADVANTAGES:

- Requires low shift force mechanism --- rules out friction seals/dynamic o-rings as valve designs
- Larger solenoid required versus solenoid air pilot - typically requires more electricity (wattage)
