The Archaeology of Mesoamerican Animals Kitty F. Emery, Christopher M. Gotz, 2013-11-15 Recognition of the role of animals in ancient diet economy politics and ritual is vital to understanding ancient cultures fully while following the clues available from animal remains in

reconstructing environments is vital to understanding the ancient relationship between humans and the world around them. In response to the growing interest in the field of zooarchaeology, this volume presents current research from across the many cultures and regions of Mesoamerica, dealing specifically with the most current issues in zooarchaeological literature. Geographically, the essays collected here index the different aspects of animal use by the indigenous populations of the entire area between the northern borders of Mexico and the southern borders of lower Central America. This includes such diverse cultures as the north Mexican hunter-gatherers, the Olmec, Maya, Mixtec, Zapotec, and Central American Indians. The time frame of the volume extends from the earliest human occupation, the Preclassic, Classic, Postclassic, and Colonial manifestations, to recent times. The book's chapters, written by experts in the field of Mesoamerican zooarchaeology, provide important general background on the domestic and ritual use of animals in early and classic Mesoamerica and Central America, but also deal with special aspects of human-animal relationships, such as early domestication and symbolism of animals, and important yet otherwise poorly represented aspects of taphonomy and zooarchaeological methodology. Spanish language version also available. ISBN 978 1 937040 12 3

The Wide Lens in Archaeology Allan Gilbert, Justin Lev-Tov, Paula Wapnish, 2017-06-01. This book honors the memory of Brian Hesse, a scholar of Near Eastern archaeology, a writer of alliterative and punned publication titles, and an accomplished amateur photographer. Hesse specialized in zooarchaeology, but he influenced a wider range of excavators and ancient historians with his broad interpretive reach. He spent much of his career analyzing faunal materials from different countries in the Middle East, including Iran, Yemen, and Israel, and his publications covered themes particular to animal bone studies, such as domestication, ancient market economics, as well as broader themes, such as determining ethnicity in archaeology. The essays in this volume reflect the breadth of his interests. Most chapters share an Old World geographic setting, focusing either on Europe or the Middle East. The topics are diverse, with the majority discussing animal bones, as was Hesse's specialization, but some take a nonfaunal perspective related to the problems with which Hesse grappled. The volume is also broad in temporal scope, ranging from Neolithic Iran to early Medieval England, and it addresses theoretical matters as well as methodological innovations, including taphonomy and the history of computers in zooarchaeology. Several of the essays are direct revisits to inspirations from, or extensions of, Hesse's own research. All the contributions reflect his intense interest in social questions about antiquity, the theme of social archaeology informed much of Brian Hesse's thinking, and it is why his work made such an impact on those working outside his own disciplinary research.

Designing Experimental Research in Archaeology Jeffrey R. Ferguson, 2010-05-15. *Designing Experimental Research in Archaeology* is a guide for the design of archaeological experiments for both students and scholars. Experimental archaeology provides a unique opportunity to corroborate conclusions with multiple trials of repeatable experiments and can provide data otherwise unavailable to archaeologists without damaging sites, remains, or artifacts. Each chapter addresses a particular classification of material culture: ceramics, stone tools, perishable materials,

composite hunting technology butchering practices and bone tools and experimental zooarchaeology detailing issues that must be considered in the development of experimental archaeology projects and discussing potential pitfalls The experiments follow coherent and consistent research designs and procedures and are placed in a theoretical context and contributors outline methods that will serve as a guide in future experiments This degree of standardization is uncommon in traditional archaeological research but is essential to experimental archaeology The field has long been in need of a guide that focuses on methodology and design This book fills that need not only for undergraduate and graduate students but for any archaeologist looking to begin an experimental research project *Archaeological Laboratory Methods* Mark Q.
