Transport And Coherent Structures In Wall Turbulence Fluid Mechanics:

Transport and Coherent Structures in Wall Turbulence Sedat Tardu, 2014-10-06 Wall bounded turbulent flows are of major importance in industrial and environmental fluid mechanics The structure of the wall turbulence is intrinsically related to the coherent structures that play a fundamental role in the transport process The comprehension of their regeneration mechanism is indispensable for the development of efficient strategies in terms of drag control and near wall turbulence management This book provides an up to date overview on the progress made in this specific area in recent years

Turbulence Structure and Modulation Alfredo Soldati, Rosesella Monti, 2014-05-04 Controlling turbulence is an important issue for a number of technological applications Several methods to modulate turbulence are currently being investigated All of them are based on the introduction of some sort of perturbation into the flow field which affect turbulence coherent structures responsible for turbulence transfer mechanisms The scope of the book is to describe several aspects of turbulence structure and modulation and to explain and discuss the most promising techniques in detail *Flows and Chemical Reactions in an Electromagnetic Field* Roger Prud'homme, 2014-10-30 This book a sequel of previous publications *Flows and Chemical Reactions* *Chemical Reactions* *Flows in Homogeneous Mixtures* and *Chemical Reactions and Flows in Heterogeneous Mixtures* is devoted to flows with chemical reactions in the electromagnetic field The first part entitled basic equations consists of four chapters The first chapter provides an overview of the equations of electromagnetism in Minkowski spacetime This presentation is extended to balance equations first in homogeneous media unpolarized in the second chapter and homogeneous fluid medium polarized in the third chapter Chapter four is devoted to heterogeneous media in the presence of electromagnetic field Balance equations at interfaces therein The second part of this volume is entitled applications It also includes four chapters Chapter five provides a study of the action of fields on fire Chapter six deals with a typical application for the Peltier effect chapter seven is devoted to metal plasma interaction especially in the Langmuir probe and finally Chapter Eight deals with the propulsion Hall effect Are given in appendix supplements the laws of balance with electromagnetic field and described the methodology for establishing one dimensional equations for flow comprising active walls as is the case in some Hall effect thrusters **Modelling and Experimentation in Two-Phase Flow** Volfango Bertola, 2014-05-04 This is an up to date review of recent advances in the study of two phase flows with focus on gas liquid flows liquid liquid flows and particle transport in turbulent flows The book is divided into several chapters which after introducing basic concepts lead the reader through a more complex treatment of the subjects The reader will find an extensive review of both the older and the more recent literature with abundance of formulas correlations graphs and tables A comprehensive though non exhaustive list of bibliographic references is provided at the end of each chapter The volume is especially indicated for researchers who would like to carry out experimental theoretical or computational work on two phase flows as well as for professionals who wish to learn more about this topic **Turbulent coherent structures, Secondary**

currents and Sediment ridges Scherer, Markus Maximilian, 2024-06-19 The origin of secondary currents and subaqueous sediment patterns in natural rivers is analysed from first principles For this purpose simulations of sediment transport in canonical turbulent open channel flows are performed using a numerical technique that resolves all relevant flow scales and the dynamics of the individual sand grains The high fidelity datasets reveal the fundamental importance of individual coherent structures for the development of sediment patterns and secondary flows

Multiphase Flow Phenomena And Applications: Memorial Volume In Honor Of Gad Hetsroni Gennady Ziskind, George Yadigaroglu, 2018-02-09 This volume is dedicated to a very special person Professor Gad Hetsroni 1934 2015 His towering figure was familiar to researchers in heat transfer and multiphase flow all over the world He was the founding Editor of the International Journal of Multiphase Flow and the person who defined and promoted the discipline around the journal The unique community formed in this field during his lifetime gathers every three years for a major conference the International Conference on Multiphase Flow that most recent was held in May 2016 in Florence Italy This was the first time ever Gad did not attend ICMF Friends and colleagues from many countries came to Florence to present their personal tributes and scientific papers honoring Gad Reviewed and edited tributes and scientific papers dedicated to Gad from these memorial sessions comprise the core content of this memorial volume certain persons who could not participate in the ICMF made later contributions

Articles in Wall-Bounded Turbulent Flows: Deposition, Re-Suspension and Agglomeration Jean-Pierre Minier, Jacek Pozorski, 2016-07-26 The book presents an up to date review of turbulent two phase flows with the dispersed phase with an emphasis on the dynamics in the near wall region New insights to the flow physics are provided by direct numerical simulation and by fine experimental techniques Also included are models of particle dynamics in wall bounded turbulent flows and a description of particle surface interactions including multi layer deposition and re suspension

Flows and Chemical Reactions in Heterogeneous Mixtures Roger Prud'homme, 2014-10-30 This book a sequel of previous publications Flows and Chemical Reactions and Chemical Reactions in Flows and Homogeneous Mixtures is devoted to flows with chemical reactions in heterogeneous environments Heterogeneous media in this volume include interfaces and lines They may be the site of radiation Each type of flow is the subject of a chapter in this volume We consider first in Chapter 1 the question of the generation of environments biphasic individuals dusty gas mist bubble flow Chapter 2 is devoted to the study at the mesoscopic scale particle fluid exchange of momentum and heat with determination of the respective exchange coefficients In Chapter 3 we establish simplified equations of macroscopic balance for mass for the momentum and energy in the case of particles of one size monodisperse suspension Radiative phenomena are presented in Chapter 5
