Unstoppable Global Warming Every 1 500 Years Updated And Expanded Edition:

Unstoppable Global Warming S. Fred Singer, 2006-09-13 Singer and Avery present in popular language supported by in depth scientific evidence the compelling concept that global temperatures have been rising mostly or entirely because of a natural cycle Using historic data from two millennia of recorded history combined with the natural physical records found in ice cores seabed sediment cave stalagmites and tree rings *Unstoppable Global Warming* argues that the 1 500 year solar driven cycle that has always controlled the earth s climate remains the driving force in the current warming trend Trillions of dollars spent on reducing fossil fuel use would have no effect on today s rising temperatures The public policy key Singer and Avery propose is adaptation not fruitless attempts at prevention Further they offer convincing evidence that civilization s most successful eras have coincided with the cycle s warmest peaks With the added benefit of modern technology humanity can not only survive global climate change but thrive

Climate Change Daniel Bedford, John Cook, 2016-07-18 Climate change is one of the most controversial and misunderstood issues of the 21st century This book provides a clear understanding of the issue by presenting scientific facts to refute falsehoods and misinformation and to confirm the validity of other assertions Is public understanding of global warming suffering from politically biased news coverage Is it true that the global scientific community has not reached a consensus on whether humans are causing climate change This important book addresses these questions and many more about global warming identifying common claims about climate change and using quantifiable evidence based information to examine their veracity The authors of this work examine 35 specific claims that have been made about global climate change by believers and skeptics These assertions some true some false will guide readers to a much deeper understanding of the extent of climate change whether any climate change that is taking place is human caused whether climate change is likely to be a serious problem in the future whether scientists agree on the fundamentals of climate change and whether climate change impacts can be mitigated Examples of specific issues that are scrutinized and explained in the book include trends in the extent and condition of Arctic and Antarctic Sea ice packs the accuracy of climate forecasting models whether extreme weather events are increasing as a result of climate change and the benefits and drawbacks of various schemes to limit greenhouse gas emissions

Darwinian Evolution and Classical Liberalism Stephen C. Dilley, 2013-05-02 Darwinian Evolution and Classical Liberalism canvasses an array of thinkers from the past to the present as it examines fundamental political philosophical ethical economic anthropological and scientific aspects of the ferment between Darwinian biology and classical liberalism Early chapters focus on classical thinkers like John Locke and Adam Smith while later chapters provide analyses of present day classical liberals focusing especially on F A Hayek Thomas Sowell and Larry Arnhart the most prominent advocates of contemporary classical liberalism Thematically the volume falls into three parts Part I examines foundational matters arguing that Darwinism and classical liberalism hold incompatible visions of morality human nature and individual autonomy This section also contends that the free market s spontaneous order is fully compatible with a teleological or non Darwinian view of the universe Part II turns to contemporary applications contending that Darwinism and classical liberalism are at odds in their views of or implications about limited government vital religion economic freedom and the traditional family This section also argues that since its inception Darwinism has attenuated core tenets and values of classical liberalism and Western civilization Part III of the volume contains alternative views to those in the first two parts adding critical diversity to the book Respectively these chapters hold that Darwinian evolution simply has little to say about classical liberalism an evolutionary account of human volition is fully compatible with the individual choice presupposed in classical liberalism and evolutionary naturalism unlike religious alternatives provides a strong foundation for freedom morality and the traditional family
