Trends In Signal Transduction Research:

Trends in Signal Transduction Research Jennifer N. Meyers, 2007 Signal transduction is any process by which a cell converts one kind of signal or stimulus into another. Processes referred to as signal transduction often involve a sequence of biochemical reactions inside the cell which are carried out by enzymes and linked through second messengers. In many transduction processes an increasing number of enzymes and other molecules become engaged in the events that proceed from the initial stimulus. Responses of cells to environmental signals, toxins, and stressors have profound implications for diverse aspects of human health and disease, including development, cystic fibrosis, diabetes, asthma, heart, autoimmune diseases, and cancer. The delineation of the signal transduction pathways affected in these and other complex human diseases are likely to present new avenues for therapeutic intervention and understanding of human disease mechanisms. New Trends in Osteoarthritis Treatment Elisa Belluzzi, Assunta Pozzuoli, 2024-02-09 Osteoarthritis can be categorized as the deterioration of protective cartilage surrounding joints, resulting in swelling, pain, and increased difficulty in joint movement. Several factors are known to increase the risk of osteoarthritis, such as joint injury, comorbidity with other conditions, rheumatoid arthritis, age, and obesity. While joint damage is irreversible, symptoms can be managed, and various life style changes can slow disease progression. To date, there is no cure for osteoarthritis, and while joint damage is irreversible, symptoms can be managed with various life style changes to slow disease progression. Pain management can often be achieved with over-the-counter analgesics. Alternatives include non-steroidal anti-inflammatory drugs (NSAIDs), opioids, capsaicin cream, and in extreme cases, steroid injections. Non-pharmaceutical treatments include physiotherapy, assisted devices such as specialized footwear, and transcutaneous electrical nerve stimulation (TENS). In cases of extreme joint damage, various surgeries may be available to patients, such as arthroplasty surgery. *History and Trends in Bioprocessing and Biotransformation*, 2003-07-01.
