Underwater Acoustic Digital Signal Processing And Communication Systems:

Underwater Acoustic Digital Signal Processing and Communication Systems Robert Istepanian, Milica

Stojanovic, 2002-08-31 Underwater Acoustic Digital Signal Processing and Communication Systems describes new design and development methodologies in underwater acoustic signal processing. The emphasis is on experimental efforts and modern DSP implementations. The book assembles a number of contributions from authors who have contributed significantly to the field. The topics cover a broad range of underwater acoustic signal processing applications: underwater wireless communications, array processing for mapping, detection and localization of objects, biotelemetry, speech processing for divers, acoustic imaging, and use of neural networks for underwater signal processing.

Underwater Acoustic Digital Signal Processing and Communication Systems Robert Istepanian, Milica Stojanovic, 2013-03-09 Underwater acoustic digital signal processing and communications is an area of applied research that has witnessed major advances over the past decade. Rapid developments in this area were made possible by the use of powerful digital signal processors (DSPs) whose speed, computational power, and portability allowed efficient implementation of complex signal processing algorithms and experimental demonstration of their performance in a variety of underwater environments. The early results served as a motivation for the development of new and improved signal processing methods for underwater applications which today range from classical autonomous underwater vehicles and sonar signal processing to remote control underwater wireless communications. This book presents the diverse areas of underwater acoustic signal processing and communication systems through a collection of contributions from prominent researchers in these areas. Their results, both new and those published over the past few years, have been assembled to provide what we hope is a comprehensive overview of the recent developments in the field. The book is intended for a general audience of researchers, engineers, and students working in the areas of underwater acoustic signal processing. It requires the reader to have a basic understanding of the digital signal processing concepts. Each topic is treated from a theoretical perspective followed by practical implementation details. We hope that the book can serve both as a study text and an academic reference.

Digital Underwater Acoustic Communications Lufen Xu, Tianzeng Xu, 2016-09-16 Digital Underwater Acoustic Communications focuses on describing the differences between underwater acoustic communication channels and radio channels, discusses loss of transmitted sound in underwater acoustic channels, describes digital underwater acoustic communication signal processing, and provides a comprehensive reference to digital underwater acoustic communication equipment. This book is designed to serve as a reference for postgraduate students and practicing engineers involved in the design and analysis of underwater acoustic communications systems, as well as for engineers involved in underwater acoustic engineering. It introduces the basics of underwater acoustics along with the advanced functionalities needed to achieve reliable communications in the underwater environment. It identifies challenges in underwater acoustic channels relative to radio channels.

propagation and solutions Shows how multi path structures can be thought of as time diversity signals Presents a new robust signal processing system and an advanced FH SS system for multimedia underwater acoustic communications with moderate communication ranges above 20km and rates above 600bps Describes the APNFM system for underwater acoustic communication equipment including both civil and military applications to be employed in active sonar to improve its performance

Research and Applications of Digital Signal Processing Joceli Mayer, Malek Karaim, Aboelmagd Noureldin, 2025-09-03 This comprehensive volume explores cutting edge developments in digital signal processing across diverse applications Covering four key areas including image processing and computer vision deep learning integration signal processing analysis and hardware implementation the book presents innovative research ranging from multispectral imaging and medical MRI reconstruction to speech emotion recognition and underwater acoustics Each chapter demonstrates practical applications of DSP techniques bridging theoretical foundations with real world solutions in healthcare infrastructure monitoring financial systems and control engineering We hope this book will become an essential reading for researchers engineers and practitioners seeking to understand contemporary DSP challenges and emerging methodologies

Electromechanical Transmitters for ELF/VLF Radio Jarred S. Glickstein, Soumyajit Mandal, 2022-11-02 This book describes a new extremely low frequency ELF very low frequency VLF miniaturized transmitter concept based on the mechanical motion of permanent magnets or electrets The authors explain how utilizing the very high energy density of modern ferromagnetic and ferroelectric materials such electromechanical transmitters can provide much higher field generation efficiency than conventional antennas thus enabling practical ELF VLF wireless communications links The text begins with the fundamental challenges of such links and provides an historical overview of the attempts that have been made to address these challenges It then focuses on the design and implementation of practical electromechanical ELF VLF transmitters which is an interdisciplinary subject that spans multiple research areas including electromagnetics power electronics control systems and mechanical design The authors also describe how such transmitters can be combined with receivers and signal processing algorithms to realize complete ELF VLF links in challenging environments
