Visions Of Sustainability Cities And Regions:

Visions of Sustainability Hildebrand Frey, Paul Yaneske, 2007-10-26 This book examines the sustainability of cities and regions and concludes that currently sustainability is not achievable. By identifying how cities and regions in the past have maintained or lost sustainability and how cities and regions of today might achieve sustainability in the future, it gives a clear definition and an understanding of the true meaning of sustainability. It provides a new conceptual framework for the assessment of the sustainability of cities and regions, reveals what options are available for humankind to achieve or loose sustainability, identifies research that will allow the systematic establishment of the appropriate indicators for sustainable development in cities and regions. Presenting a framework to guide and direct research in the measures needed to achieve and maintain sustainability, the book will be of considerable help to local authorities and political and government bodies responsible for establishing guidelines for the planning and monitoring of sustainable urban development. It will be of fundamental interest to ecologists, environmentalists, geographers, regional planners and urban designers both in private practice and academia. **Managing Environmental and Energy Transitions for Regions and Cities** OECD, 2020-11-18

This report offers guidance on how to prepare regions and cities for the transition towards a climate neutral and circular economy by 2050 and is directed to all policymakers seeking to identify and implement concrete and ambitious transition pathways. It describes how cities, regions and rural areas can manage the transition in a range of policy domains including energy supply, conversion and use, the transformation of mobility systems and land use practices. *The Emerald Handbook of Smart Cities in the Gulf Region* Miltiadis D. Global Environment Outlook - GEO-6: Healthy Planet, Healthy People UN Environment, 2019-06-06

Published to coincide with the Fourth United Nations Environmental Assembly, UN Environment's sixth Global Environment Outlook calls on decision makers to take bold and urgent action to address pressing environmental issues in order to protect the planet and human health. By bringing together hundreds of scientists, peer reviewers and collaborating institutions and partners, the GEO reports build on sound scientific knowledge to provide governments, local authorities, businesses and individual citizens with the information needed to guide societies to a truly sustainable world by 2050. GEO 6 outlines the current state of the environment, illustrates possible future environmental trends and analyses the effectiveness of policies. This flagship report shows how governments can put us on the path to a truly sustainable future, emphasising that urgent and inclusive action is needed to achieve a healthy planet with healthy people. This title is also available as Open Access on Cambridge Core.

Retrofitting Cities for Tomorrow's World Malcolm Eames, Tim Dixon, Miriam Hunt, Simon Lannon, 2017-09-06

A groundbreaking exploration of the most promising new ideas for creating the sustainable cities of tomorrow. The culmination of a four-year collaborative research project undertaken by leading UK universities in partnership with city authorities, prominent architecture firms and major international consultants, *Retrofitting Cities for Tomorrow's World* explores the theoretical and practical aspects of the transition towards sustainability in the built environment that will occur in the years ahead. The emphasis throughout is on emerging systems innovations and bold new ways of imagining and reimagining urban retrofitting set within the context of futures-based thinking. The concept of urban retrofitting has gained prominence within both the research and policy arenas in recent years. While cities are often viewed as a source of environmental stress and resource depletion, they are also hubs of learning and innovation offering enormous potential for scaling up technological responses. But city-level action will require a major shift in thinking and a scaling up of positive responses to climate change and the associated threats of environmental and social degradation. Clearly, the time has come for a more coordinated, planned and strategic approach that will allow cities to transition to a sustainable future. This book summarizes many of the best new ideas currently in play on how to achieve those goals. Reviews the most promising ideas for how to approach planning and coordinating a more sustainable urban future by 2050 through retrofitting existing structures.

Explores how cities need to govern for urban retrofit and how future urban transitions and pathways can be managed modeled and navigated Offers inter disciplinary insights from international contributors from both the academic and professional spheres Develops a rigorous conceptual framework for analyzing existing challenges and fostering innovative ways of addressing those challenges Retrofitting Cities for Tomorrow s World is must reading for academic researchers including postgraduates insustainability urban planning environmental studies economics among other fields It is also an important source of fresh ideas and inspiration for town planners developers policy advisors and consultants working within the field of sustainability energy and the urban environment
