Schlarb,2011-08-30 The area of tribology deals with the design friction wear and lubrication of interacting surfaces in relative motion Polymer nanocomposite materials are increasingly common and offer remarkable improvements in the friction and wear properties of both bulk materials and coatings This book gives a comprehensive description of polymeric nanocomposites both as bulk materials and as thin surface coatings and their behavior and potential use in tribological applications It provides the preparation techniques friction and wear mechanisms properties of polymeric nanocomposites characterization evaluation and selection methodology It also provides various examples of application of polymeric nanocomposites Provides a complete reference from the preparation to the selection of polymeric nanocomposites Explains the theory through examples of real world applications More than 20 international tribology experts contribute to their area of expertise

High Pressure Rheology for Quantitative Elastohydrodynamics Scott S. Bair,2007-03-06 Computational elastohydrodynamics a part of tribology has existed happily enough for about fifty years without the use of accurate models for the rheology of the liquids used as lubricants For low molecular weight liquids such as low viscosity mineral oils it has been possible to calculate with precision the film thickness in a concentrated contact provided that the pressure and temperature are relatively low even when the pressure variation of viscosity is not accurately modelled in detail Other successes have been more qualitative in nature using effective properties which come from the fitting of parameters used in calculations to experimental measurements of the contact behaviour friction or film thickness High Pressure Rheology for Quantitative Elastohydrodynamics is intended to provide a sufficiently accurate framework for the rheology of liquids at elevated pressure that it may be possible for computational elastohydrodynamics to discover the relationships between the behaviour of a lubricated concentrated contact and the measurable properties of the liquid lubricant The required high pressure measurement techniques are revealed in detail and data are presented for chemically well defined liquids that may be used as quantitative reference materials Presents the property relations required for a quantitative calculation of the tribological behaviour of lubricated concentrated contacts Details of high pressure experimental techniques Complete description of the pressure and temperature dependence of viscosity for high pressures Some little known limitations on EHL modelling
