Field and Service Robotics Marco Hutter, Roland Siegwart, 2017-11-01

This book contains the proceedings of the 11th FSR Field and Service Robotics which is the leading single track conference on applications of robotics in challenging environments This conference was held in

Zurich Switzerland from 12-15 September 2017. The book contains 45 full-length peer-reviewed papers organized into a variety of topics: Control, Computer Vision, Inspection, Machine Learning, Mapping, Navigation and Planning, and Systems and Tools. The goal of the book and the conference is to report and encourage the development and experimental evaluation of field and service robots and to generate a vibrant exchange and discussion in the community. Field robots are non-factory robots typically mobile that operate in complex and dynamic environments on the ground, Earth, or other planets, under the ground, underwater, in the air, or in space. Service robots are those that work closely with humans to help them with their lives. The first FSR was held in Canberra, Australia, in 1997. Since that first meeting, FSR has been held roughly every two years, cycling through Asia, Americas, and Europe.

International Regulation of Non-Military Drones Anna Masutti, Filippo Tomasello, The increasing civilian use of Unmanned Aircraft Systems (UASs) is not yet associated with a comprehensive regulatory framework; however, new rules are rapidly emerging which aim to address this shortfall. This insightful book offers a thorough examination of the most up-to-date developments and considers potential ways to address the various concerns surrounding the use of UASs in relation to safety, security, privacy, and liability.

AHS International Specialists' Meeting, 2011. Unmanned Aircraft Systems Reg Austin, 2011-09-20. Unmanned Aircraft Systems delivers a much-needed introduction to UAV system technology taking an integrated approach that avoids compartmentalising the subject. Arranged in four sections, parts 1-3 examine the way in which various engineering disciplines affect the design, development, and deployment of UAS. The fourth section assesses the future challenges and opportunities of UAS. Technological innovation and increasingly diverse applications are two key drivers of the rapid expansion of UAS technology. The global defence budget for UAS procurement is expanding, and in the future, the market for civilian UAVs is expected to outmatch that of the military. Agriculture, meteorology, conservation, and border control are just a few of the diverse areas in which UAVs are making a significant impact; the author addresses all of these applications, looking at the roles and technology behind both fixed-wing and rotorcraft UAVs. Leading aeronautical consultant Reg Austin co-founded the Bristol International Remotely Piloted Vehicle (RPV) conferences in 1979, which are now the longest-established UAS conferences worldwide. In addition, Austin has over 40 years' experience in the design and development of UAS. One of Austin's programmes, the Sprite UAV system, has been deployed around the world and operated by day and night in all weathers.
