Urban Logistics Iste Iuml Dela:

Implementation of Urban Logistics Systems Raphael Preindl, 2022-02-14 Concept components summarized under the umbrella term urban logistics has become a strategic priority for many public and private players in recent years However many urban logistics undertakings fail to be put into practice and are eventually terminated for various reasons which can be considered implementation barriers that exist in practice While research on urban logistics is proliferating the implementation of urban logistics systems has been insufficiently addressed Thus the dissertation is concerned with the implementation of urban logistics systems Raphael Preindl investigates the implementation process from a holistic perspective and follows the design science research methodology based on an eclectic theoretical approach Next to a contingency analysis of the conceptual design of urban logistics systems and the identification of success factors the study develops an adaptable implementation concept that is specifically tailored to the context of urban logistics and thereby clearly goes beyond a purely operational approach

Sustainable Urban Logistics Jesus Gonzalez-Feliu, 2018 **Urban Logistics** Michael Browne, Sönke Behrends, Johan Woxenius, Genevieve Giuliano, José Holguin-Veras, 2018-12-03 Approximately 80 per cent of European and American citizens live in an urban environment Due to their large populations and extensive commercial establishments urban areas require large quantities of goods and services for commercial and domestic use This results in increasing levels of demand for freight transport services Freight transport in towns and cities is a major contributor to environmental impacts particularly to local air pollution and noise Urban Logistics addresses public policy makers freight transport companies and receivers of supplies providing them with the information and guidance to affect change in the logistics of the city Urban Logistics is written by an outstanding team of international editors combining their expertise and using their research from leading business schools in Sweden and the US There are also valuable contributions from academics and industry experts from companies and universities from all over the world The book includes clear examples of initiatives that work and business case developments as well as toolkits for policymakers and managers who are devising new initiatives There is an in depth examination of different aspects of urban logistics such as retail logistics for cities urban food supply chains services and the special logistics requirements involved construction waste management and e commerce and home delivery There is also a focus on networks and partnerships and an analysis of innovation as a new constant

Sustainable Urban Logistics: Concepts, Methods and Information Systems Jesus Gonzalez-Feliu, Frédéric Semet, Jean-Louis Routhier, 2013-09-07 Since the 1990 s researchers practitioners and public administrations have given more thought to urban logistics However their interests and goals are not the same and several approaches do not produce efficient logistics systems as a result This book aims to provide both a conceptual framework for urban logistics planning and management and to create a basis for deploying solutions that aim to reduce the main nuisances related to urban goods The proposed book is divided in two parts The first proposes a set of methodological chapters written

by key authors which aim to support decision makers in their current choices related to urban logistics. In addition to public authorities' aims and goals, the book highlights the importance of private actors and shows how supply chain management can deal with the problems of the last urban mile and its integration in global logistics chains. The second presents several applied research works that deal with current planning and practice issues in urban logistics such as the role of city planning, the place of night deliveries in carrier organization, the limits of logistics pooling and the real estate market among others. The book was written by key authors all having considerable research experience and recognised as experts in their respective fields. Each chapter presents methods and results of research works written for a broad audience and more precisely directed to both academics and practitioners.

The Future of Urban Logistics Gabriel Socha, 2019-05-17

Seminar paper from the year 2019 in the subject Business economics Supply Production Logistics grade 1.0 language English abstract. This paper deals with a selection of the most important future oriented questions in the field of urban logistics. It analyzes the relevance of urban logistics, examines transportation types of the future and discusses the impact of demographic change and labor shortage on the logistics market. Further, the concept Post 4.0 is critically questioned and it is reflected to what extent the fields procurement and production logistics are influenced by the global trends. Lastly, a conclusion summarizes the most important findings and introduces additional research fields. Urban logistics is a topic of increasing interest to both research and practice. Reasons for this are diverse. Population growth in urban areas is expected to continue, meaning that by 2030 79% of the German population will live in these areas. This in turn has an impact on the already growing e-commerce, which is a major driver for parcel delivery. As a result, parcel volume is expected to reach 5 billion pieces per year by 2026, equaling a growth of 100% since 2016. With a growing volume, not only the complexity of routes and business scalability increases, but also environmental problems, which are already the focus of various stakeholders anyway. Thus, logistics companies are required to develop innovative solutions such as those derived from the possibilities of digitalization in order to meet the increasing and changing demands of stakeholders.

City Logistics 3 Eiichi

Taniguchi, Russell G. Thompson, 2018-05-24. This volume of three books presents recent advances in modelling, planning and evaluating city logistics for sustainable and liveable cities based on the application of ICT (Information and Communication Technology) and ITS (Intelligent Transport Systems). It highlights modelling the behaviour of stakeholders who are involved in city logistics, as well as planning and managing policy measures of city logistics, including cooperative freight transport systems in public-private partnerships. Case studies of implementing and evaluating city logistics measures in terms of economic, social and environmental benefits from major cities around the world are also given.
