## **Usability Of Speech Dialog Systems Usability Of Speech Dialog Systems:**

**Usability of Speech Dialog Systems** Thomas Hempel, 2008-04-04 Before designing a speech application system three key questions have to be answered who will use it why and how often This book focuses on these high level questions and gives a criteria of when and how to design speech systems After an introduction the state of the art in modern voice user interfaces is displayed The book goes on to evolve criteria for designing and evaluating successful voice user interfaces Trends in this fast growing area are also presented *Estimating Spoken Dialog System Quality with User Models*

Klaus-Peter Engelbrecht, 2012-08-04 Spoken dialog systems have the potential to offer highly intuitive user interfaces as they allow systems to be controlled using natural language However the complexity inherent in natural language dialogs means that careful testing of the system must be carried out from the very beginning of the design process This book examines how user models can be used to support such early evaluations in two ways by running simulations of dialogs and by estimating the quality judgments of users First a design environment supporting the creation of dialog flows the simulation of dialogs and the analysis of the simulated data is proposed How the quality of user simulations may be quantified with respect to their suitability for both formative and summative evaluation is then discussed The remainder of the book is dedicated to the problem of predicting quality judgments of users based on interaction data New modeling approaches are presented which process the dialogs as sequences and which allow knowledge about the judgment behavior of users to be incorporated into predictions All proposed methods are validated with example evaluation studies **Quality of Telephone-Based Spoken**

**Dialogue Systems** Sebastian Möller, 2005-12-28 Quality of Telephone Based Spoken Dialogue Systems is a systematic overview of assessment evaluation and prediction methods for the quality of services such as travel and touristic information phone directory and messaging or telephone banking services A new taxonomy of quality of service is presented which serves as a tool for classifying assessment and evaluation methods for planning and interpreting evaluation experiments and for estimating quality A broad overview of parameters and evaluation methods is given both on a system component level and for a fully integrated system Three experimental investigations illustrate the relationships between system characteristics and perceived quality The resulting information is needed in all phases of system specification design implementation and operation Although Quality of Telephone Based Spoken Dialogue Systems is written from the perspective of an engineer in telecommunications it is an invaluable source of information for professionals in signal processing communication acoustics computational linguistics speech and language sciences human factor design and ergonomics **Spoken Dialogue**

**Systems** Kristina Jokinen, Michael McTear, 2022-05-31 Considerable progress has been made in recent years in the development of dialogue systems that support robust and efficient human machine interaction using spoken language Spoken dialogue technology allows various interactive applications to be built and used for practical purposes and research focuses on issues that aim to increase the system's communicative competence by including aspects of error correction cooperation

multimodality and adaptation in context This book gives a comprehensive view of state of the art techniques that are used to build spoken dialogue systems It provides an overview of the basic issues such as system architectures various dialogue management methods system evaluation and also surveys advanced topics concerning extensions of the basic model to more conversational setups The goal of the book is to provide an introduction to the methods problems and solutions that are used in dialogue system development and evaluation It presents dialogue modelling and system development issues relevant in both academic and industrial environments and also discusses requirements and challenges for advanced interaction management and future research Table of Contents Preface Introduction to Spoken Dialogue Systems Dialogue Management Error Handling Case Studies Advanced Approaches to Dialogue Management Advanced Issues Methodologies and Practices of Evaluation Future Directions References Author Biographies

**Handbook of Research on User Interface Design and Evaluation for Mobile Technology**, 2008 This book provides students researchers educators and practitioners with a compendium of research on the key issues surrounding the design and evaluation of mobile user interfaces such as the physical environment and social context in which a device is being used and the impact of multitasking behavior typically exhibited by mobile device users Provided by publisher

*Simulation-Based Usability Evaluation of Spoken and Multimodal Dialogue Systems* Stefan Hillmann, 2017-11-23 This book describes an extension of the user behaviour simulation UBS of an existing tool for automatic usability evaluation AUE This extension is based upon a user study with a smart home system It uses technical sociological methods for the execution of the study and the analysis of the collected data A comparison of the resulting UBS with former UBSs as well as the empirical data shows that the new simulation approach outperforms the former simulation The improvement affects the prediction of dialogue metrics that are related to dialogue efficiency and dialogue effectiveness Furthermore the book describes a parameter based data model as well as a related framework Both are used to uniformly describe multimodal human computer interactions and to provide such descriptions for usability evaluations Finally the book proposes a new two stage method for the evaluation of UBSs The method is based on the computation of a distance measures between two dialogue corpora and the pair wise comparison of distances among several dialogue corpora

**Spoken, Multilingual and Multimodal Dialogue Systems** Ramon Lopez Cozar Delgado, Masahiro Araki, 2005-11-11 Dialogue systems are a very appealing technology with an extraordinary future Spoken Multilingual and Multimodal Dialogues Systems Development and Assessment addresses the great demand for information about the development of advanced dialogue systems combining speech with other modalities under a multilingual framework It aims to give a systematic overview of dialogue systems and recent advances in the practical application of spoken dialogue systems Spoken Dialogue Systems are computer based systems developed to provide information and carry out simple tasks using speech as the interaction mode Examples include

travel information and reservation weather forecast information directory information and product order Multimodal Dialogue Systems aim to overcome the limitations of spoken dialogue systems which use speech as the only communication means while Multilingual Systems allow interaction with users that speak different languages Presents a clear snapshot of the structure of a standard dialogue system by addressing its key components in the context of multilingual and multimodal interaction and the assessment of spoken multilingual and multimodal systems In addition to the fundamentals of the technologies employed the development and evaluation of these systems are described Highlights recent advances in the practical application of spoken dialogue systems This comprehensive overview is a must for graduate students and academics in the fields of speech recognition speech synthesis speech processing language and human computer interaction technology It will also prove to be a valuable resource to system developers working in these areas Linguistics and Language
