Language XML tools and technologies toward solving data interoperability issues between legacy data repositories Past efforts to address these issues have largely failed XML has the capability to address many of the past problems but this can only be accomplished when the supporting COTS tools and technologies are available The thesis first establishes the underlying issues that need to be addressed It then evaluates the current state of technologies and COTS products and describes the advantages and disadvantages of each Finally it focuses in on the schema for a specific relational database demonstrates a process by which data exchange can be implemented and outlines the issues remaining to be solved

Evaluation of the Extensible Markup Language (XML) as a Means of Establishing Interoperability Between Multiple Department of Defense (DoD) Databases Eddie L. Davis, 2001-06-01 This thesis evaluates the ability of the Extensible Markup Language XML to address the interoperability problem that exists between Department Of Defense DOD legacy systems Due to the different Database Management Systems DBMS used within DOD interoperability is a major flaw The need for communication between the DBMS within DOD is necessary and this thesis will focus on this problem This thesis focuses in on the problems that exist and assesses XML as a means of correcting these problems This thesis uses the Joint Common Database JCDB as a means of showing XML to be a viable solution
