Dodd, 2002. Covering the latest trends and technology changes, this is the fully updated and revised bestselling guide to telecommunications for the nontechnical professional. Includes sections on convergence, globalization, speech recognition and 3G cellular networks. **Wireless and Mobile Network Security** Hakima Chaouchi, Maryline Laurent-Maknavicius, 2013-03-01. This book provides a thorough examination and analysis of cutting edge research and security solutions in wireless and mobile networks. It begins with coverage of the basic security concepts and fundamentals which underpin and provide the knowledge necessary for understanding and evaluating security issues, challenges and solutions. This material will be of invaluable use to all those working in the network security field and especially to the many people entering the field. The next area of focus is on the security issues and available solutions associated with off the shelf wireless and mobile technologies such as Bluetooth, WiFi, WiMax, 2G and 3G. There is coverage of the security techniques used to protect applications downloaded by mobile terminals through mobile cellular networks and finally the book addresses security issues and solutions in emerging wireless and mobile technologies such as ad hoc and sensor networks, cellular 4G and IMS networks. **Performance Simulations of Wideband CDMA** Chi Lam Ng, 2000. *Engineering Wireless-based Software Systems and Applications* Jerry Gao, 2006. This comprehensive resource offers professionals detailed guidance on the engineering aspects of building software for wireless communications. From design and architecture to security and testing, the book shows how to overcome every engineering challenge encountered in successfully developing wireless software. *Network Planning and Dimensioning Process in WCDMA* Osama Mustafa Abusaid, 2010. **The Journal of China Universities of Posts and Telecommunications**, 1994. *Telecommunications*, 2007. **Wiley Encyclopedia of Telecommunications**, 2003. **Location-Based Services and Geo-Information Engineering** Allan Brimicombe, Chao Li, 2009-08-03. Location Based Services (LBS) are the delivery of data and information services where the content of those services is tailored to the current location and context of a mobile user. This is a new and fast growing technology sector incorporating GIS, wireless technologies, positioning systems and mobile human computer interaction. Geo Information (GI) Engineering is the design of dependably engineered solutions to society's use of geographical information and underpins applications such as LBS. These are brought together in this comprehensive text that takes the reader through from source data to product delivery. This book will appeal to professionals and researchers in the areas of GIS, mobile telecommunications services and LBS. It provides a comprehensive view and in depth knowledge for academia and industry alike. It serves as essential reading and an excellent resource for final year undergraduate and postgraduate students in
