Propensity Score Analysis Wei Pan, Haiyan Bai, 2015-03-18 This book is designed to help researchers better design and analyze observational data from quasi experimental studies and improve the validity of research on causal claims It provides clear guidance on the use of different propensity score analysis PSA methods from the fundamentals to complex cutting edge techniques Experts in the field introduce underlying concepts and current issues and review relevant software programs for PSA The book addresses the steps in propensity score estimation including the use of generalized boosted models how to identify which matching methods work best with specific types of data and the evaluation of balance results on key background covariates after matching Also covered are applications of PSA with complex data working with missing data

controlling for unobserved confounding and the extension of PSA to prognostic score analysis for causal inference User friendly features include statistical program codes and application examples Data and software code for the examples are available at the companion website www.guilford.com/pan/materials *Modelling for Coastal Hydraulics and Engineering* K. W. Chau, 2010-01-22 Mechanistic models are often employed to simulate processes in coastal environments However these predictive tools are highly specialized involve certain assumptions and limitations and can be manipulated only by experienced engineers who have a thorough understanding of the underlying principles This results in significant constraints on their manipulation as well as large gaps in understanding and expectations between the developers and users of a model Recent advancements in soft computing technologies make it possible to integrate machine learning capabilities into numerical modelling systems in order to bridge the gaps and lessen the demands on human experts This book reviews the state of the art in conventional coastal modelling as well as in the increasingly popular integration of various artificial intelligence technologies into coastal modelling Conventional hydrodynamic and water quality modelling techniques comprise finite difference and finite element methods The novel algorithms and methods include knowledge based systems genetic algorithms artificial neural networks and fuzzy inference systems Different soft computing methods contribute towards accurate and reliable prediction of coastal processes Combining these techniques and harnessing their benefits has the potential to make extremely powerful modelling tools
