Waking The Giant How A Changing Climate Triggers Earthquakes Tsunamis And Volcanoes:

Waking the Giant Bill McGuire, 2012-02-23 Twenty thousand years ago our planet was an icehouse Temperatures were down six degrees ice sheets kilometres thick buried much of Europe and North America and sea levels were 130m lower The following 15 millennia saw an astonishing transformation as our planet metamorphosed into the temperate world upon which our civilisation has grown and thrived One of the most dynamic periods in Earth history saw rocketing temperatures melt the great ice sheets like butter on a hot summer s day feeding torrents of freshwater into ocean basins that rapidly filled to present levels The removal of the enormous weight of ice at high latitudes caused the crust to bounce back triggering earthquakes in Europe and North America and provoking an unprecedented volcanic outburst in Iceland A giant submarine landslide off the coast of Norway sent a tsunami crashing onto the Scottish coast while around the margins of the continents the massive load exerted on the crust by soaring sea levels encouraged a widespread seismic and volcanic rejoinder In many ways this post glacial world mirrors that projected to arise as a consequence of unmitigated climate change driven by human activities Already there are signs that the effects of climbing global temperatures are causing the sleeping giant to stir once again Could it be that we are on track to bequeath to our children and their children not only a far hotter world but also a more geologically fractious one

Waking the Giant Bill McGuire, 2013-04-25 The last 20 000 years has seen our world flip from icehouse to greenhouse provoking earthquakes tsunamis and volcanic outbursts Like a giant stirring from a long sleep the Earth beneath our feet tossed and turned Bill McGuire argues that climate change is once more setting the scene for the giant to reawaken and we can already see the signs

Quantitative Sustainability Stefano Fantoni,Nicola Casagli,Cosimo Solidoro,Marina Cobal,2024-01-02 This open access book focuses on how scientific methodologies can help industrial managers entrepreneurs and policymakers handle the 17 Sustainable Development Goals in an efficient and realistic way It also offers an operative scheme for scientists to overcome their discipline barriers Is interdisciplinarity an intrinsic research value or is it merely instrumental for handling the increasing flux of open problems that sustainability poses to science Can these problems of sustainability be solved with what the authors already know Is it just a matter of having the right people at the table and giving them sufficient resources or is it something more Is meeting the needs of the present without compromising those of future generations a scientific definition of sustainable development Questions similar to those posed in the sixties regarding complexity must be asked about sustainability today In addition the new data science includes powerful tools for making novelquantitative predictions about future sustainability indicators an open problem that the book discusses This book is primarily addressed to Ph D students postdocs and senior researchers in the Life and Hard Science LHS and Social Sciences and Humanities SSH disciplines as well as professionals of the primary secondary and tertiary industrial sectors **Stormy Weather** William E.

Connolly,2024-09-03 Composed as a counter history of western philosophical and political thought Stormy Weather explores the role western cosmologies have played in the conquests of paganism in Europe and the Americas the production of climate wreckage and the concealment of that wreckage from western humanists and earth scientists until late in the day A lived cosmology Connolly says contains embedded understandings about the beginnings of the earth and the way time unfolds The text engages the major western cosmologies of Augustine Descartes Kant Tocqueville together with pagan and minor western orientations that posed challenges to them or could have Hesiod Ovid William Apess Amazonian and Aztec cosmologies Catherine Keller s minor Christianity James Baldwin and Michel Serres instigate key responses often challenging binary logics and the subject object dichotomy with a world of multiple human and nonhuman subjectivities Connolly pursues a

conception of time as a multiplicity of intersecting temporalities to come to terms with the vicissitudes of climate destruction and the grandeur of an earth neither highly susceptible to mastery nor designed to harmonize smoothly with humans The book revisits the improbable necessity of a politics of swarming to respond to the ongoing wreckage and potential fascist responses to vast infusions of climate refugees from the south into temperate zone capitalist states Stormy Weather draws on the work of earth scientists indigenous thinkers naturalists humanists and students of nonwestern cosmologies Ultimately Connolly contends that critical intellectuals today must not remain enclosed in disciplinary silos or even in the humanities as currently defined to do justice to our moment of climate wreckage

A Visual Guide to Volcanoes and Earthquakes Diana Malizia, 2017-12-15 This full color dynamically illustrated volume helps readers better understand the causes of fractures and the magnitude and violence of the forces deep within the earth It contains shocking scenes of cities convulsed by earthquakes and volcanoes natural phenomena that in mere seconds unleash rivers of fire destroy buildings highways bridges and gas and water lines and leave entire cities without electricity or phone service Earthquakes near coastlands can cause tsunamis waves that spread across the ocean with the speed of an airplane A tsunami that reaches a coast can be more destructive than the earthquake itself All of this fierce dynamism is brought into vivid focus here with stunning photographs cutaway diagrams and information packed infographics

How to Think about

the Climate Crisis Graham Parkes, 2020-11-26 Choice Outstanding Academic Title 2021 Coping with the climate crisis is the greatest challenge we face as a species We know the main task is to reduce our emissions as rapidly as possible to minimise the harm to the world's population now and for generations to come What on earth can philosophy offer us In this compelling account of a problem we think we know inside out the philosopher Graham Parkes outlines the climatic predicament we are in and how we got here and explains how we can think about it anew by considering the relevant history science economics politics and for the first time the philosophies underpinning them Introducing the reality of global warming and its increasingly dire consequences he identifies the immediate obstructions to coping with the problem outlines the libertarian ideology behind them and shows how they can be circumvented Drawing on the wisdom of the ancients in both the East Asian and Western traditions as embodied in such figures as Confucius Laozi Zhuangzi Dogen Plato Epicurus Marcus Aurelius and Nietzsche Parkes shows how a greater awareness of non Western philosophies and especially the Confucian political philosophy advocated by China can help us deal effectively with climate change and thrive in a greener future If some dominant Western philosophical ideas and their instantiation in politics and modern technology got us into our current crisis Parkes demonstrates persuasively that expanding our philosophical horizons will surely help get us out
