Basics Timber Construction Ludwig Steiger, 2017-05-22 Together with masonry construction, timber construction is usually one of the first building exercises encountered by the student in his or her training. This volume begins by presenting the building material timber in all of its facets and explaining the fundamental principles of timber construction. It then goes on to describe the most important building components and their constructive possibilities specifically as they pertain to building with timber. Subjects: Timber as building material, Timber preservation, Systems for building with timber, Building components from foundation to roof.

Building Biology Nurgül Ece, 2018-03-19 Health and environmental compatibility are key topics in contemporary society. The book shows how the built environment can be aesthetically pleasing, modern, and at the same time healthy and environmentally friendly. It makes the link between architecture as a design task and a building biology approach to design. Building biology teaches us about the holistic interaction between people and their built environment. It combines building culture with ecology and disciplines such as chemistry, biology, geology, and psychology. Using the building of the Institute of Building Biology Sustainability (IBN) as a model, building biology criteria and approaches are explained in detail. Numerous additional current projects illustrate how these are implemented in responsible, healthy, and hence sustainable architecture.
