Frank,1995

The use of cable stayed bridges in medium and long span applications in the United States has increased significantly in the past ten years Of paramount importance with this type of bridge is the protection of the stay cables from corrosive elements An extensive survey reported herein showed a general concern over the adequacy of the corrosion protection of the most widely used current system In this study the popular two barrier system prestressing strand inside polyethylene sheath injected with portland cement grout was examined experimentally The effectiveness of the grout in providing secondary corrosion protection in the event of a cut or break in the external sheathing was a major focus of the experimental work
