Environmental Health Perspectives, 2004-07 **Topics in Environmental Epidemiology** Kyle Steenland, David A. Savitz, 1997 A comprehensive survey of the epidemiology of common environmental exposures this volume covers diet water particulates in outdoor air nitrogen dioxide ozone environmental tobacco smoke radon in homes electromagnetic fields and lead Design and analysis issues risk assessment and meta analysis and future directions in environmental epidemiology are also discussed All chapters provide a review of the relevant literature as well as an overview of important methodologic issues particularly exposure assessment and statistical methods Most of these exposures are widespread and low level and are thought to increase the risk of chronic diseases that have many causes Even though the disease risks due to these exposures may be low the public health burden may be significant because large numbers of people are exposed Such exposures are inherently difficult to detect via observational epidemiology This book clarifies the problems and suggests ways to move forward It will be useful to students and practitioners of public health environmental health and epidemiology

Environmental Epidemiology and Risk Assessment Tim E. Aldrich, Jack Griffith, 1992-12-15 Environmental Epidemiology and Risk Assessment addresses the historical development of environmental epidemiology touching on recent sensationalized environmental tragedies such as Love Canal and Chernobyl Understanding the importance that public opinion plays in the success or failure of any important regulatory decision involving human studies the authors elaborate the issue of communicating scientific findings to the public The authors have employed the material in this book while teaching graduate courses in epidemiology and in the application of field studies for environmentally related risk assessment Environmental Epidemiology and Risk Assessment is convenient for students to use in independent study while instructors can use it as a reference and background source for classroom lectures Each chapter contains a list of specific learning objectives a detailed narrative including illustrations and case histories and instructive assignments The authors have also provided a list of recommended reading which complements the extensive bibliography and selected glossaries This comprehensive text provides state of the art instruction in the methodologic considerations with the design and conduct of environmental epidemiologic studies The authors discuss disease mechanisms the study of disease clusters and surveillance techniques as these topics relate to environmental epidemiology Environmental Epidemiology and Risk Assessment is a compilation of over thirty years of practical experience university and public agency instruction federal agency experiences and community investigations bringing together disparate scientific disciplines and offering the most comprehensive compendium of information to be found on the subject Although this book serves as a reference text for trained epidemiologists it places considerably more emphasis than is commonly found in epidemiologic texts on exposure monitoring the use of biomarkers in epidemiologic studies laboratory practices for environmental sampling risk assessment risk management and environmental law This how to book is an invaluable source for public health professionals with limited

didactic training in epidemiology but with interests and professional responsibilities that require a working understanding of the discipline
