Tortoises Through The Lens A Visual Exploration Of A Mojave Desert Icon:

Tortoises Through the Lens David Lamfrom, Rana Knighten, 2010 For many years it was common for people who visited the wild California desert to grab a tortoise as a souvenir Desert tortoises are charismatic animals The hatchlings are unbelievably cute And the species was once so abundant that residents in Joshua Tree California used to collect wild tortoises the first weekend each May paint their shells and set them to race against each other Punctuated by generous amounts of beer this festival was called Turtle Days and was used as a marketing tool to entice visitors to the desert *Exploring Deserts* Karen Sirvaitis, 2014-01-01 Throughout history people have always explored new frontiers Adventure fame and scientific discovery have all driven humans to forge into the unknown This title examines the exploration of deserts Easy to read engaging text takes readers to the Sahara and beyond examines the explorers who journeyed to these vast arid landscapes and traces the development of the technology and techniques that made this exploration possible Well placed sidebars vivid photos helpful maps and a glossary enhance readers understanding of the topic Additional features include a table of contents a selected bibliography source notes and an index plus a timeline and essential facts Aligned to Common Core Standards and correlated to state standards Essential Library is an imprint of Abdo Publishing a division of ABDO

Keystone Species That Live in Deserts Bonnie Hinman, 2015-09 Most arches built today contain a single building block at the top that is the most important piece This special piece can be found in the arches of soaring cathedrals doorways in temples and even simple buildings made out of wooden blocks It is called a keystone and it holds everything else together Remove the keystone and the building or doorway is likely to collapse The same thing is true in nature Certain species of animals and plants are so important to their ecosystems that if they disappear the whole system may collapse They are called keystone species Some keystone species are large like white rhinos while others are quite small like honey bees But size doesn't matter in an ecosystem All living things rely on other species to survive A keystone species plays an especially large role that affects many different species in an ecosystem Some keystone species are at the top of a huge ecosystem like the Greater Yellowstone Ecosystem while others may affect a tiny ecosystem in a river or forest Whether the ecosystem is big or small the result of a keystone species disappearing or being greatly reduced is the same Just like one falling domino can cause many others to fall the loss of a keystone species can lead to the extinction of many other species Today scientists are focusing more attention on preserving the natural balance in ecosystems Identifying and protecting keystone species is an important part of their work **Solar Energy and the Mojave Desert Tortoise** Philip J.
