The 'New' Documentary Nexus Anna Wiehl, 2019-05-23 In the last ten years the field of documentary has been subject to substantial paradigm shifts due to the rise of digital media practices This publication explores some central questions arising in this context Who are the different interactors networking within the new documentary nexus How can we conceptualize interactive documentary practices as encounters and dynamic interactions within digital media culture and beyond How can one methodologically approach this complex networked yet dynamic nexus in its constant flux Developing a coherent and expandable operational set of methods to describe and analyse paradigmatic cases this book addresses documentary theorists new media scholars and students of media and communication studies who want to gain a survey of current developments in the field of interactive documentary practices

The Computable City Michael Batty, 2024-03-26 How computers simulate cities and how they are also being embedded in cities changing our behavior and the way in which cities evolve At every stage in the history of computers and communications it is safe to say we have been unable to predict what happens next When computers first appeared nearly

seventy five years ago primitive computer models were used to help understand and plan cities but as computers became faster smaller more powerful and ever more ubiquitous cities themselves began to embrace them As a result the smart city emerged In *The Computable City* Michael Batty investigates the circularity of this peculiar evolution how computers and communications changed the very nature of our city models which in turn are used to simulate systems composed of those same computers Batty first charts the origins of computers and examines how our computational urban models have developed and how they have been enriched by computer graphics He then explores the sequence of digital revolutions and how they are converging focusing on continual changes in new technologies as well as the twenty first century surge in social media platform economies and the planning of the smart city He concludes by revisiting the digital transformation as it continues to confound us with the understanding that the city now a high frequency twenty four hour version of itself changes our understanding of what is possible

The Cultural Logic of Computation David Golumbia,2009-08-30 Advocates of computers make sweeping claims for their inherently transformative power new and different from previous technologies they are sure to resolve many of our existing social problems and perhaps even to cause a positive political revolution In *The Cultural Logic of Computation* David Golumbia who worked as a software designer for more than ten years confronts this orthodoxy arguing instead that computers are cultural all the way down that there is no part of the apparent technological transformation that is not shaped by historical and cultural processes or that escapes existing cultural politics From the perspective of transnational corporations and governments computers benefit existing power much more fully than they provide means to distribute or contest it Despite this our thinking about computers has developed into a nearly invisible ideology Golumbia dubs computationalism an ideology that informs our thinking not just about computers but about economic and social trends as sweeping as globalization Driven by a programmer's knowledge of computers as well as by a deep engagement with contemporary literary and cultural studies and poststructuralist theory The

Cultural Logic of Computation provides a needed corrective to the uncritical enthusiasm for computers common today in many parts of our culture *New Media and the Nation in Malaysia* Susan Leong, 2013-10-08 In the four decades or so since its invention the internet has become pivotal to how many societies function influencing how individual citizens interact with and respond to their governments Within Southeast Asia while most governments subscribe to the belief that new media technological advancement improves their nation's socio economic conditions they also worry about its cultural and political effects This book examines how this set of dynamics operates through its study of new media in contemporary Malaysian society Using the social imaginary framework and adopting a socio historical approach the book explains the varied understandings of new media as a continuing process wherein individuals and their societies operate in tandem to create negotiate and enact the meaning ascribed to concepts and ideas In doing so it also highlights the importance of non users to national technological policies Through its examination of the ideation and development of Malaysia's Multimedia Super Corridor mega project to date and reference to the seminal socio political events of 2007 2012 including the 2008 General Elections Bersih and Hindraf rallies this book provides a clear explanation for new media's prominence in the multi ethnic and majority Islamic society of Malaysia today It is of interest to academics working in the field of Media and Internet Studies and Southeast Asian Politics **Alternative Historiographies of the Digital Humanities** Dorothy Kim, Adeline Koh, 2021

The Net Effect Thomas Streeter, 2011 This book about America's romance with computer communication looks at the Internet not as a harbinger of the future or the next big thing but as an expression of the times Streeter demonstrates that our ideas about what connected computers are for have been in constant flux since their invention In the 1950s they were imagined as the means for fighting nuclear wars in the 1960s as systems for bringing mathematical certainty to the messy complexity of social life in the 1970s as countercultural playgrounds in the 1980s as an icon for what's good about free markets in the 1990s as a new frontier to be conquered and by the late 1990s as the transcendence of markets in an anarchist open source utopia The Net Effect teases out how culture has influenced the construction of the internet and how the structure of the internet has played a role in cultures of social and political thought cover *A Companion to Digital Literary Studies* Ray Siemens, Susan Schreibman, 2013-03-20 This Companion offers an extensive examination of how new technologies are changing the nature of literary studies from scholarly editing and literary criticism to interactive fiction and immersive environments A complete overview exploring the application of computing in literary studies Includes the seminal writings from the field Focuses on methods and perspectives new genres formatting issues and best practices for digital preservation Explores the new genres of hypertext literature installations gaming and web blogs The Appendix serves as an annotated bibliography Religion and Science in the Mirror of Buddhism Francisca Cho, Richard K. Squier, 2015-10-14 This book offers a Buddhist perspective on the conflict between religion and science in contemporary western society Examining Buddhist history authors Francisca Cho and Richard K Squier offer a comparative analysis of Buddhist and western scientific epistemologies that transcends the limitations of non Buddhist approaches to the subject of religion and science The book is appropriate for undergraduates graduate students and researchers interested in comparative religion or in the intersection of religion and science and Buddhist Studies **Biomedical Informatics** Andreas Holzinger, 2014-05-06 This book provides a broad overview of the topic Bioinformatics with focus on data information and knowledge From data acquisition and storage to visualization ranging through privacy regulatory and other practical and theoretical topics the author touches several fundamental aspects of the innovative interface between Medical and Technology domains that is Biomedical Informatics Each chapter starts by providing a useful inventory of definitions and commonly used acronyms for each topic and throughout the text the reader finds several real world examples methodologies and ideas that complement the technical and theoretical background This new edition includes new sections at the end of each chapter called future outlook and research avenues providing pointers to future challenges At the beginning of each chapter a new section called key problems has been added where the author discusses possible traps and unsolvable or major problems **Digital Aboriginal** Mikela Tarlow, Philip Tarlow, 2002-04-24 The Aborigine's view of the world suggests that all things are interconnected Every relationship in turn influences every other relationship Along these same lines this book reveals how the modern day

business world organizes this unlimited range of possibilities and how readers can reorganize and redirect business plans merely by shifting marketing beliefs

Memory Machines Belinda Barnet, 2013-07-15 This book explores the history of hypertext an influential concept that forms the underlying structure of the World Wide Web and innumerable software applications Barnet tells both the human and the technological story by weaving together contemporary literature and her exclusive interviews with those at the forefront of hypertext innovation tracing its evolutionary roots back to the analogue machine imagined by Vannevar Bush in 1945

Where Good Ideas Come From Steven Johnson, 2010-10-05 A fascinating deep dive on innovation from the New York Times bestselling author of *How We Got To Now* and *Unexpected Life* The printing press the pencil the flush toilet the battery these are all great ideas But where do they come from What kind of environment breeds them What sparks the flash of brilliance How do we generate the breakthrough technologies that push forward our lives our society our culture Steven Johnson s answers are revelatory as he identifies the seven key patterns behind genuine innovation and traces them across time and disciplines From Darwin and Freud to the halls of Google and Apple Johnson investigates the innovation hubs throughout modern time and pulls out the approaches and commonalities that seem to appear at moments of originality

Automate This Christopher Steiner, 2012-08-30 The rousing story of the last gasp of

human agency and how today's best and brightest minds are endeavoring to put an end to it. It used to be that to diagnose an illness, interpret legal documents, analyze foreign policy, or write a newspaper article, you needed a human being with specific skills and maybe an advanced degree or two. These days, high-level tasks are increasingly being handled by algorithms that can do precise work not only with speed but also with nuance. These bots started with human programming and logic, but now their reach extends beyond what their creators ever expected. In this fascinating, frightening book, Christopher Steiner tells the story of how algorithms took over and shows why the bot revolution is about to spill into every aspect of our lives, often silently without our knowledge. The May 2010 Flash Crash exposed Wall Street's reliance on trading bots to the tune of a 998-point market drop and 1 trillion in vanished market value. But that was just the beginning. In *Automate This*, we meet bots that are driving cars, penning haiku, and writing music mistaken for Bach's. They listen in on our customer service calls and figure out what Iran would do in the event of a nuclear standoff. There are algorithms that can pick out the most cohesive crew of astronauts for a space mission or identify the next Jeremy Lin. Some can even ingest statistics from baseball games and spit out pitch-perfect sports journalism indistinguishable from that produced by humans. The interaction of man and machine can make our lives easier. But what will the world look like when algorithms control our hospitals, our roads, our culture, and our national security? What happens to businesses when we automate judgment and eliminate human instinct? And what role will be left for doctors, lawyers, writers, truck drivers, and many others? Who knows, maybe there's a bot learning to do your job this minute.
