

Topic Review Guide: Genetic Drift (Video #2)

To Think About: How is natural selection a major mechanism of evolution?

Watch: [Mr. Andersen's Genetic Drift video](#).

Read: Chapter 23, [Campbell's Biology](#), 9th ed. (2011).

Supplementary Resources:

- [Crash Course's Population Genetics video](#).
- Kimball's Biology Pages: [The Hardy-Weinberg Equilibrium](#)
- [Genetic Drift Simulation at the University of Arizona](#)

Listen and Look: Here is a list of key terms you will hear and see during this podcast. Get to know them! Be able to connect them to one another using a concept map.

Gene pool	Alleles	Genetic drift	Population
Allele frequency	Founder effect	Hardy-Weinberg Equilibrium	
Bottleneck effect	Species		

Recall and Review: Use the lecture in the video and your textbook to help you answer these questions in your BINDER.

1. What is the briefest definition of genetic drift?
2. What do the variables p and q stand for?
3. How does each of the following affect the allele frequency of a population?
 - a. Small population
 - b. Large population
 - c. Bottlenecking event, such as a natural disaster or man-made bottleneck (through hunting to near extinction)
 - d. Founding event
 - e. Sexual selection
 - f. Natural selection
4. Why does less genetic drift take place in a large population?
5. How does natural selection result in an increase in the frequency of beneficial alleles in a population over time, and a decrease in the frequency of deleterious (harmful) alleles?
6. How does the process of sexual reproduction affect the evolutionary process?
7. Give examples of directional selection, stabilizing selection and diversifying selection.
8. Create a drawing that explains how each of the following mechanisms can affect allele frequencies in a population:
 - a. mutation
 - b. gene flow
 - c. genetic drift
 - d. nonrandom mating
 - e. selection (natural or otherwise)
9. Explain why the concept of Hardy-Weinberg equilibrium is important even though the assumptions that it is based on are never met in nature.
10. Although the assumptions of the Hardy-Weinberg equilibrium are never met completely in real populations, the genotype frequencies of many populations do not deviate significantly from H-W expectations. Explain why.

Bogdan, 2014-01-02 Q Why do organisms need cognition A To get information about their environments Q Why such information A Because organisms need to guide their behaviors to goals Q Why guidance A Because it leads to goal satisfaction Q Why goals Cognition is a naturally selected response by genetic programs to the evolutionary pressure of guiding behaviors to goals Organisms are material systems that maintain and replicate themselves by engaging their world in goal directed ways This is how guidance of behavior to goal grounds and explains cognition and the main forms in which it manages information Guidance to goal also makes a difference to the understanding of human cognition Simpler forms of cognition evolve to handle fixed informational transactions with the world whereas human cognition evolves the abilities to script flexible goal situations that fit specific contexts of behavior This teleoevolutionary approach has important implications for cognitive science two of which are programmatic One is that information that guides to goal is not exclusively cognitive guidance is also affected by ecological facts and regularities as well as by design assumptions about them The other implication is that the functional analyses

dominant in cognitive science and philosophy of mind are incomplete and weak They are incomplete in that they focus only on the explicitly encoded cognitive information and its behavioral consequences thus ignoring the larger guidance arrangements and weak because causal and functional relations implement but underdetermine goal directed and goal guided processes A work dealing expressly with the foundations of cognitive science this book addresses basic but seldom asked questions about the evolutionary rationale of cognition and the way this rationale has shaped the major types of cognition It also provides a teleological answer to these basic questions in terms of goal directedness and particularly guidance of behavior to goal In so doing the work defends the scientific respectability and the explanatory necessity of teleology by showing that goal directedness characterizes the work of genetic programs *Research in Education* ,1972
