Universal Patient Medical Record* Michael McGuire,2004 This book describes how an automated patient medical record
could be built that could evolve into a universal patient record Such a universal patient record would change medical care
from a focus on short term care to one oriented to long term preventive care It would remove patient care from being the
province of the single physician to that of the responsibility of many different healthcare providers possibly located anywhere
in the world Future of Trust in Computing David Grawrock,Helmut Reimer,Ahmad-Reza Sadeghi,Claire Vishik,2009-07-26

The concept of trust is related to many aspects of our daily lives and different stakeholders use the term trust in various
contexts Trust is crucial in today s information societies for ensuring success of digital economies in all countries and regions
This book contains papers that were presented at the conference Future of Trust in Computing and brings together
academics regulators technologists and practitioners working in diverse areas of trust from various parts of the world The
authors discuss issues they are facing and begin to form a common framework Security and privacy threats and remedies
core trust enforcing technologies innovative applications regulatory issues privacy and usability economics as well as
provable security and assurance are discussed Finally a number of papers touch upon innovative approaches to trust that
begin to define new fields of research and innovative types of technologies *The Mathematics of Secrets* Joshua
Holden,2018-10-02 Explaining the mathematics of cryptography The Mathematics of Secrets takes readers on a fascinating
tour of the mathematics behind cryptography the science of sending secret messages Using a wide range of historical
anecdotes and real world examples Joshua Holden shows how mathematical principles underpin the ways that different codes
and ciphers work He focuses on both code making and code breaking and discusses most of the ancient and modern ciphers
that are currently known He begins by looking at substitution ciphers and then discusses how to introduce flexibility and
additional notation Holden goes on to explore polyalphabetic substitution ciphers transposition ciphers connections between
ciphers and computer encryption stream ciphers public key ciphers and ciphers involving exponentiation He concludes by
looking at the future of ciphers and where cryptography might be headed The Mathematics of Secrets reveals the
mathematics working stealthily in the science of coded messages A blog describing new developments and historical
discoveries in cryptography related to the material in this book is accessible at <http://press.princeton.edu/titles/10826.html>

Computational Science and Its Applications -- ICCSA 2004 Antonio Laganà,2004-05-07 The four volume set LNCS 3043
3046 constitutes the refereed proceedings of the International Conference on Computational Science and its Applications
ICCSA 2004 held in Assisi Italy in May 2004 The four volumes present a total of 460 revised reviewed papers selected from
numerous submissions The proceedings spans the whole range of computational science from foundational issues in
computer science and mathematics to advanced applications in virtually all sciences making use of computational techniques

The four volumes give a unique account of recent results in the area **Handbook of Electronic Security and Digital Forensics** Hamid Jahankhani, 2010 The widespread use of information and communications technology ICT has created a global platform for the exchange of ideas goods and services the benefits of which are enormous However it has also created boundless opportunities for fraud and deception Cybercrime is one of the biggest growth industries around the globe whether it is in the form of violation of company policies fraud hate crime extremism or terrorism It is therefore paramount that the security industry raises its game to combat these threats Today's top priority is to use computer technology to fight computer crime as our commonwealth is protected by firewalls rather than firepower This is an issue of global importance as new technologies have provided a world of opportunity for criminals This book is a compilation of the collaboration between the researchers and practitioners in the security field and provides a comprehensive literature on current and future e security needs across applications implementation testing or investigative techniques judicial processes and criminal intelligence The intended audience includes members in academia the public and private sectors students and those who are interested in and will benefit from this handbook Dynamic and Mobile GIS Roland Billen, Elsa Joao, David Forrest, 2006-11-10 With the widespread use of PDAs wireless internet Internet based GIS and 3G and 4G telecommunications the technology supporting mobile GIS is rapidly gaining popularity and effectiveness Dynamic and Mobile GIS Investigating Changes in Space and Time addresses Web GIS mobile GIS and the modeling processing and representation of dynamic events Application Level Security Management Michael Neuhaus, 2005-04-25 Inhaltsangabe Abstract Today more and more enterprises are developing business applications for Internet usage which results in the exposure of their sensitive data not only to customers and business partners but also to hackers Because web applications provide the interface between users sitting somewhere within the World Wide Web and enterprises backend resources hackers can execute sophisticated attacks that are almost untraceable aiming to steal modify or delete enterprises vital data even when it is protected by passwords or encryption As recent viruses and worms such as Nimda CodeRed or MSBlast have shown modern attacks are occurring at the application itself since this is where high value information is most vulnerable Such attack scenarios are becoming very problematic nowadays since traditional network security products such as firewalls or network intrusion detection systems are completely blind to those malicious activities and therefore can not offer any protection at all Modern protection mechanisms require more sophisticated detection capabilities in order to protect enterprises assets from such attacks now and in the future Additionally web application security currently is a highly dynamic and also very emerging field within enterprises IT security activities Therefore this diploma thesis aims to provide a strong focussed picture on the current state of web application security and its different possibilities to raise the overall security level of already implemented web applications and also of future web applications Acting as a basis for further analysis the currently most common web application vulnerabilities are described to get an overview of what a web

application has to be protected of and where the root problems of these weaknesses are lying Although these generic categories may not be applicable to every actually implemented web application they may be used as baseline for future web applications Armed with the background of the current vulnerabilities and their related root causes a detailed analysis of currently available countermeasures will provide recommendations that may be taken at each of the certain stages of a web application s lifecycle Since all further decisions generally should be based upon risk evaluations of specifically considered systems a possible risk management assessment methodology is provided within the thesis Controls and countermeasures are provided from an *Essential Blogging* Cory Doctorow,2002-08-28 Explains what Weblogs are and the technology behind them covering such topics as the components of a blog and a blog post desktop blogging using templates to customize blogs and syndicating stories with RSS **Cyber Crime: Concepts, Methodologies, Tools and Applications**
