Web Operations Keeping The Data On Time:

Web Operations John Allspaw, Jesse Robbins, 2010-06-21 A web application involves many specialists but it takes people in web ops to ensure that everything works together throughout an application's lifetime. It's the expertise you need when your start up gets an unexpected spike in web traffic or when a new feature causes your mature application to fail. In this collection of essays and interviews web veterans such as Theo Schlossnagle, Baron Schwartz, and Alistair Croll offer insights into this evolving field. You'll learn stories from the trenches from builders of some of the biggest sites on the Web on what's necessary to help a site thrive. Learn the skills needed in web operations and why they're gained through experience rather than schooling. Understand why it's important to gather metrics from both your application and infrastructure. Consider common approaches to database architectures and the pitfalls that come with increasing scale. Learn how to handle the human side of outages and degradations. Find out how one company avoided disaster after a huge traffic deluge. Discover what went wrong after a problem occurs and how to prevent it from happening again. Contributors include John Allspaw, Heather Champ, Michael Christian, Richard Cook, Alistair Croll, Patrick Debois, Eric Florenzano, Paul Hammond, Justin Huff, Adam Jacob, Jacob Loomis, Matt Massie, Brian Moon, Anoop Nagwani, Sean Power, Eric Ries, Theo Schlossnagle, Baron Schwartz, Andrew Shafer.

[The IT4ITTM Standard, Version 3.0](#) The Open Group, 2022-12-14 This publication is the specification of The Open Group IT4IT Standard Version 3.0, a standard of The Open Group. It describes a reference architecture that can be used to manage the business of Information Technology (IT) and the associated end-to-end lifecycle management of Digital Products. It is intended to provide a prescriptive Target Architecture and clear guidance for the transformation of existing technology management practices for a faster, scalable, automated, and practical approach to deploying product-based investment models and providing an unprecedented level of operational control and measurable value. This foundational IT4IT Reference Architecture is independent of specific technologies, vendors, organization structures, process models, and methodologies. It can be mapped to any existing technology landscape. It is flexible enough to accommodate the continuing evolution of operational and management paradigms for technology. It addresses every Digital Product lifecycle phase from investment decision making to end of life. The IT4IT Standard addresses a critical gap in the Digital Transformation toolkit: the need for a unifying architectural model that describes and connects the capabilities, value streams, functions, and operational data needed to manage a Digital Product Portfolio at scale. The IT4IT Standard provides an

approach to making digital investment decisions and managing digital outcomes that is particularly useful for C level executives responsible for Digital Transformation as a top down view of digital value creation Product Managers and Product Marketing Managers whose portfolios include significant digital content as a way to integrate marketing priorities with product delivery practices Governance risk and compliance practitioners as a guide to controlling a modern digital landscape Enterprise and IT Architects as a template for IT tool rationalization and for governing end to end technology management architectures Technology buyers as the basis for Requests for Information RFIs and Requests for Proposals RFPs and as a template for evaluating product completeness Consultants and assessors as a guide for evaluating current practice against a well defined standard Technology vendors as a guide for product design and customer integrations Technical support staff as a guide for automating and scaling up support services to deal with modern technology deployment velocity
