The Radar Range Equation for the Detection of Steady Targets in Weibull Clutter Leon C. Rountree, AIR FORCE INST OF TECH WRIGHT-PATTERSON AFB OH., 1990 In this thesis the detection characteristics of a steady target immersed in radar clutter characterized by returns statistically modeled according to a Weibull probability density function are developed A detector model is developed by modifying an envelope detection scheme used to detect deterministic signals in Gaussian noise By examining the statistics of the detector output under alternate hypotheses an expression for the probability of detection P_d is developed in terms of the probability of false alarm P_{fa} the signal to clutter ratio SCR and the Weibull skewness parameter b which is a function of the type of terrain causing the clutter This expression is used in conjunction with a form of the radar range equation for area clutter to describe the relationship between P_d , P_{fa} , SCR, b and the radar detection range This relationship involves Marcum's Q function and an algorithm is presented which evaluates this function The algorithm is a series approximation also presented as a recursive relationship that can be computed to a desired precision Plots of P_d versus SCR and P_d versus range are developed for various values of P_{fa} and b The plots provide a means of evaluating the detector performance and predicting the radar detection range for several values of b

Modern Radar Systems Hamish Meikle, 2008 This revised and updated edition to the popular Artech House book Modern Radar Systems offers complete and current coverage of the subject including new material on accuracy resolution and convolution and correlation The book features more than 540 illustrations drawn in Maple V that offer a greater understanding of various

waveforms and other two and three dimensional functions to help you more accurately analyze radar system performance The effects of pulse shaping on transmitter stability and spectra are discussed a topic which is becoming more and more important in the age of electromagnetic compatibility The book addresses the importance of low attenuation and reflection between the main radio frequency blocks including the use of oversized waveguides for long runs Women in Signal Processing Hagit Messer, Monica Bugallo, Maria Sabrina Greco, Fauzia Ahmad, 2022-12-12 At present less than 30% of researchers worldwide are women As an estimate this number is even lower in the field of Signal Processing with some sources indicating it could be around 10% Long standing biases and gender stereotypes are discouraging girls and women away from science related fields and STEM research in particular Science and gender equality are however essential to ensure sustainable development as highlighted by UNESCO In order to change traditional mindsets gender equality must be promoted stereotypes defeated and girls and women should be encouraged to pursue STEM careers Frontiers in Signal Processing is proud to offer this platform to promote the work of women researchers and engineers across all areas of Signal Processing The work presented here highlights the diversity of research performed across the entire breadth of the Signal Processing landscape and presents advances in theory experiment and methodology with applications to compelling problems This article collection is open for submissions across all sections of the journal and new articles will be added as they are published Please note to be considered for this collection the corresponding author should be a female researcher
